

Adobe University Hackathon 2026

Case 01 | LearnOrbit (EdTech)

Course marketplace invisible in AI study-assistant answers

Industry: EdTech / Online learning | Theme: Speak to Agents - Brand Visibility

Practice paper | Timebox 45:00 | Suggested: read 5 | Q1-Q4 as marked | buffer 2

Unofficial - for team practice only. Official Round 2 may differ.

Scenario

LearnOrbit is an Indian online course marketplace (coding, design, aptitude). Google SEO is decent for branded + a few long-tail course pages. Monthly organic traffic is flat, not collapsing.

Students increasingly ask ChatGPT / Gemini / Perplexity: 'best DSA course for placements India', 'affordable UI/UX certificate under 5k', 'how to prepare for product company OA in 8 weeks'. LearnOrbit rarely appears. When it does, AI often confuses it with a discontinued 2021 Udemy clone and quotes wrong course prices.

Competitor SkillForge dominates AI answers via Quora threads, YouTube review roundups, and a well-maintained Wikipedia page.

Case facts / data

- Prompt board (40 prompts): LearnOrbit mention 18%, citation 4%, avg position 3.7, sentiment mixed (price skepticism).
- SkillForge mention 65%, citation 38%, avg position 1.5, sentiment positive.
- robots.txt allows Googlebot but disallows GPTBot and ClaudeBot 'temporarily'.
- Course pages are SPA-heavy; syllabus text loads after JS. Few natural-language FAQs.
- Help Center is strong but on a subdomain with weak internal linking.
- Agentic traffic mostly hits old /blog/placement-tips-2023.html; almost zero bot hits on live course PDPs.
- Top losing cluster: 'placement prep courses India'. Top rare win: branded 'LearnOrbit login' style prompts.

Questions

Question 1 (8-10 min)

Diagnose why LearnOrbit loses AI answer share despite okay SEO. Give exactly 3 root causes spanning technical access, content shape, and offsite authority. Tie each cause to a fact above.

Question 2 (7-8 min)

Build an 8-week measurement plan. Which metrics, on which platforms, and what would count as a real win for the placement-prep prompt cluster (not vanity traffic)?

Question 3 (10-12 min)

Write a prioritized 30-day GEO plan (quick wins vs deeper bets). Be specific about onsite and offsite actions. Call out one thing you would deliberately NOT do first.

Question 4 (8-10 min)

Sketch a 'Speak to Agents' workflow for LearnOrbit's growth team (monitor -> gap -> fix -> prove). What should software/agents automate vs what should humans approve, especially for education claims?

Answer frame (use on every question)

- One-line bottom line first
- 2-3 causes tied to case facts (do not invent numbers)
- Prioritized actions: quick wins vs later bets
- Metrics / how you know it worked
- Optional one-line Adobe / agent angle if it fits

Judged on: analytical thinking, strategic approach, actionable insights. Write like a sharp student analyst under time pressure - specific, not buzzwordy.

Team tip: attempt alone under timer, then compare notes. Focus debate on prioritization and metrics - not who wrote longer answers.
