Case 03 | MediLink (Telehealth)

YMYL brand hurt by outdated medical pages in AI answers

Industry: Healthcare / Telemedicine (YMYL) | Theme: Speak to Agents - Brand Visibility

Practice paper | Timebox 45:00 | Suggested: read 5 | Q1-Q4 as marked | buffer 2

Unofficial - for team practice only. Official Round 2 may differ.

Scenario

MediLink is a telehealth app for specialist consults in Tier-1/2 India. Compliance is strict. Branded search is healthy. Unbranded SEO for condition pages is mixed.

AI assistants sometimes recommend MediLink, but frequently cite an old blog claiming MediLink 'does not offer psychiatry' (they launched psychiatry 9 months ago). Another answer invents a consultation fee. A third mixes MediLink with a different clinic chain.

Case facts / data

- Mention 28%, citation 11%, sentiment volatile (trust concerns).
- Competitor CareStack mention 50%, citation 33%, helped by Times of India explainers + doctor-authored Quora answers.
- Condition pages last medically reviewed dates are inconsistent; some show 2023.
- robots allow major AI bots, but /doctors/* profiles return soft-404 empty shells to non-JS clients.
- App-store listings are strong; website EEAT signals (author bios, review dates, citations) are weak.
- Legal forbids unverified 'best doctor' claims. PR team can pitch educational explainers only.
- Top risky prompt cluster: 'online psychiatrist India cost'. Top safe cluster: 'MediLink app download'.

Questions

Question 1 (8-10 min)

In YMYL, why can a single outdated third-party page damage MediLink more inside LLMs than on classic Google SERPs? What brand-safety principle should guide GEO here?

Question 2 (8-10 min)

Prioritize 5 fixes (onsite + offsite) that improve accurate citations without making disallowed marketing claims. Rank by impact vs risk.

Question 3 (8-10 min)

Define 'winning' for the psychiatry cost prompt cluster. Is being mentioned enough, or must the answer be accurate on fees/services? How would you score answers weekly?

Question 4 (8-10 min)

Outline a human-in-the-loop agent workflow: AI proposes content updates, doctors/legal approve, CDN/edge publish, then re-measure citations. Where are the failure points?

Answer frame (use on every question)

- One-line bottom line first
- 2-3 causes tied to case facts (do not invent numbers)
- Prioritized actions: quick wins vs later bets
- Metrics / how you know it worked
- Optional one-line Adobe / agent angle if it fits

Judged on: analytical thinking, strategic approach, actionable insights. Write like a sharp student analyst under time pressure - specific, not buzzwordy.

Team tip: attempt alone under timer, then compare notes. Focus debate on prioritization and metrics - not who wrote longer answers.
