

Adobe University Hackathon 2026

Case 05 | BiteBeam (Food delivery)

Regional food app missing from 'best places / late night' AI answers

Industry: Food delivery / Local commerce | Theme: Speak to Agents - Brand Visibility

Practice paper | Timebox 45:00 | Suggested: read 5 | Q1-Q4 as marked | buffer 2

Unofficial - for team practice only. Official Round 2 may differ.

Scenario

BiteBeam is a regional food delivery app strong in 8 Indian cities. App rankings and paid UA are fine. Website SEO is mostly blog recipes and city landing pages.

Users ask AI: 'best late night biryani near me Hyderabad', 'healthy meal subscription Hyderabad students', 'food delivery with student discounts'. AI names Swiggy/Zomato and a few cloud kitchens. BiteBeam is rarely mentioned; one answer claims BiteBeam shut operations in 2024 (false).

Case facts / data

- Mention 10% on local food prompts; citation 2%. National apps dominate.
- City pages are thin templates with little unique copy. Restaurant lists load via JS after geolocation.
- AI crawlers often see empty shells because content depends on location permission.
- PR rumor about shutdown still ranks on a random news aggregator; BiteBeam never issued a clear rebuttal page.
- Student discount exists in-app only; no indexable landing page explaining eligibility.
- Agentic traffic hits recipe blogs, not /hyderabad or partner restaurant pages.
- Sentiment when mentioned: positive on prices, confusion on availability cities.

Questions

Question 1 (8-10 min)

Explain the GEO failure mode of geolocation-gated JS content for AI agents. What alternative onsite pattern would you ship for city discovery pages?

Question 2 (7-8 min)

How should BiteBeam handle the false 'shutdown' narrative across AI answers? Give a 14-day response plan (owned + earned media).

Question 3 (10-12 min)

Build a prompt strategy for 3 clusters (late night, healthy student meals, student discounts). For each: sample prompts, desired AI answer shape, and success metric.

Question 4 (8-10 min)

Can a regional app realistically beat national brands on AI answers? If yes, where (niche prompts)? If no, what 'win' should BiteBeam optimize for instead?

Answer frame (use on every question)

- One-line bottom line first
- 2-3 causes tied to case facts (do not invent numbers)
- Prioritized actions: quick wins vs later bets
- Metrics / how you know it worked
- Optional one-line Adobe / agent angle if it fits

Judged on: analytical thinking, strategic approach, actionable insights. Write like a sharp student analyst under time pressure - specific, not buzzwordy.

Team tip: attempt alone under timer, then compare notes. Focus debate on prioritization and metrics - not who wrote longer answers.
