

Adobe University Hackathon 2026

Case 08 | ClaimWise (Insurtech)

Insurance aggregator accurate on Google, risky in AI advice answers

Industry: Insurtech / Insurance aggregation (YMYL) | Theme: Speak to Agents - Brand Visibility

Practice paper | Timebox 45:00 | Suggested: read 5 | Q1-Q4 as marked | buffer 2

Unofficial - for team practice only. Official Round 2 may differ.

Scenario

ClaimWise compares health and term policies and earns referral commissions. Classic SEO comparison pages rank well. Compliance reviews every public page.

Users ask AI 'best term insurance for 25 year old non smoker', 'does policy X cover maternity waiting', 'ClaimWise vs Policybazaar'. AI sometimes recommends ClaimWise, but also invents coverage details, mixes insurer names, or cites an old page with pre-IRDAI-update waiting periods.

Case facts / data

- Mention 30%, citation 14%, position ~2.8. Policybazaar mention 75%, citation 50%.
- Sentiment okay on UX, weak on 'trust / impartiality' prompts.
- Comparison tables are interactive widgets; static HTML fallback is incomplete for bots.
- Disclaimers exist but are footer-only; AI answers often omit them.
- Several high-authority affiliate blogs still scrape ClaimWise's 2023 waiting-period numbers.
- Agentic success rate 55% on comparison URLs (timeouts on widget endpoints).
- Legal wants fewer aggressive 'best policy' phrases; product wants more AI share of voice.

Questions

Question 1 (8-10 min)

Map the conflict between growth (more AI recommendations) and compliance (no unsafe advice). What GEO strategy respects both?

Question 2 (8-10 min)

How do you stop outdated scraped numbers from poisoning LLM answers? Give onsite technical steps + offsite correction tactics.

Question 3 (8-10 min)

Propose a bot-safe version of a comparison page that still converts humans. What content must be in static HTML vs progressive enhancement?

Question 4 (8-10 min)

If ClaimWise can only monitor 25 prompts, how do you choose them? Give a selection framework and 6 example prompts spanning trust, comparison, and coverage FAQs.

Answer frame (use on every question)

- One-line bottom line first
- 2-3 causes tied to case facts (do not invent numbers)
- Prioritized actions: quick wins vs later bets
- Metrics / how you know it worked
- Optional one-line Adobe / agent angle if it fits

Judged on: analytical thinking, strategic approach, actionable insights. Write like a sharp student analyst under time pressure - specific, not buzzwordy.

Team tip: attempt alone under timer, then compare notes. Focus debate on prioritization and metrics - not who wrote longer answers.
