**Hiring Team**

AlphaGrep Securities  
Mumbai, India

**Re: Application for Quantitative Developer Intern**

Dear Hiring Team,

I am writing to apply for the Quantitative Developer Intern role at AlphaGrep Securities in Mumbai. I am a B.Tech Artificial Intelligence student at SVNIT Surat (CGPA 9.20/10, 2024–2028) with a strong foundation in mathematics, machine learning, and software engineering, and I am excited by AlphaGrep’s systematic, data-driven approach to trading across global markets.

On LogiFlow (Google Solution Challenge 2026 Global Top 106), I engineered Gradient Boosting models on 15,650 train-day records to predict operational delays (MAE 22.7 minutes, 81% within 30 minutes in cross-validation). I built feature pipelines from timetable, route, and historical delay data, validated outputs with a 100/100 automated test suite, and designed sub-second read paths (100–400 ms) separate from heavier compute—work that mirrors how research signals must be robust, fast, and production-ready. I also solo-built Community Hero (Google for Developers Vibe2Ship 2026 Global Top 20), shipping a production PWA on Cloud Run. I am comfortable in **Python** and **C++**, use **Linux** daily for development and deployment, and have shipped production systems with Docker, CI/CD, and rigorous testing.

Beyond coursework, I have **3+ years** of personal experience in Indian equities and mutual funds. I analyze price and fundamentals data, track risk and attribution, and use code to explore ideas—habits that align with exploring market microstructure and building analytical tools. Competitive programming (LeetCode Knight 2048, 711+ solved; Codeforces Specialist 1419, 252+ solved) has sharpened my problem-solving under constraints.

I would welcome the opportunity to contribute to AlphaGrep’s trading group—implementing algorithms, analyzing market data for patterns, and building libraries that support research and execution. I am available for a summer internship and can relocate to Mumbai. Thank you for your time and consideration.

Sincerely,

**Ojas Srivastava**
