Stripe University Hiring Team
Stripe
Bengaluru, India

Re: Software Engineer, Intern

Dear Hiring Team,

I am applying for the Software Engineer, Intern role with Stripe University in Bengaluru. I am a penultimate-year B.Tech Artificial Intelligence student at SVNIT Surat (CGPA 9.20/10, graduating May 2028) with a strong fundamental understanding of computer science, programming experience in Java, JavaScript, TypeScript, Python, and C++, and a track record of shipping production software with meaningful impact. Stripe's mission to increase the GDP of the internet resonates with how I approach engineering: build reliable systems, learn quickly, incorporate feedback, and actually ship.

At IFFCO, I wrote software used in production by operations teams—automating 50+ daily workflows with Node.js, Express.js, and MySQL after gathering requirements from cross-functional stakeholders. I built 10+ RESTful APIs, participated in peer code review and design discussions, and delivered through unit/integration testing, Docker, and CI/CD with minimal defects. That experience taught me how to communicate status clearly, seek feedback from mentors and teammates, and debug methodically in a cooperative team.

On LogiFlow (Google Solution Challenge 2026 Global Top 106), I co-led backend systems design on GCP Cloud Run, engineering statistics aggregation and caching layers that delivered 100–400 ms read paths across 580+ corridors. I authored high-quality pull requests with pytest regression coverage (100/100 business-rule validations) and documented REST APIs so teammates could navigate a multi-language codebase. On OA Forge, my open-source C++ online-assessment judge, I built automated test harnesses and verdict pipelines over 14K+ question occurrences and 5.5K+ test cases—work that maps to designing, developing, and testing production tooling under real constraints. I also solo-built Community Hero (Vibe2Ship 2026 Global Top 20), a user-facing PWA shipped to production on Cloud Run where I improved error handling and reporting UX based on judge and peer feedback.

I bring competitive programming discipline (LeetCode Knight, 2048, 711+ solved, 32 contests; Codeforces Specialist, 1419, 252+ solved), campus leadership through ACM SVNIT and Nexus mentoring, and genuine excitement about contributing to financial infrastructure that helps millions of businesses grow. I would welcome the opportunity to learn from Stripes who insist on doing their best work, tackle a legitimate project on your roadmap, and grow through code reviews, design discussions, and shipping software that matters.

Thank you for your consideration.

Sincerely,
Ojas Srivastava
