Re: Application for Software Intern — Job Id R4041234

Dear Hiring Team,

I am writing to apply for the Software Intern position (Job Id R4041234) with GE HealthCare's Healthcare Patient Care Solutions organization in Bengaluru. I am a penultimate-year B.Tech Artificial Intelligence student at SVNIT Surat (CGPA 9.20/10, graduating May 2028) with strong foundations in data structures, object-oriented programming (C++, Python, Java), and end-to-end software delivery. I am motivated to contribute to cutting-edge healthcare software that improves patient care, and I am available for an on-site Co-op/Intern assignment in Bengaluru (no relocation assistance required on my side).

At IFFCO, I assisted in the design, development, and testing of production software modules using Node.js, Express.js, and MySQL. I wrote and debugged 10+ RESTful APIs, participated in code reviews to improve maintainability, and contributed to unit/integration testing and CI/CD with Docker. I documented designs and test plans for handoff—experience that maps directly to shipping reliable patient-care application modules under quality and collaboration expectations.

On LogiFlow (Google Solution Challenge 2026 Global Top 106), I co-led backend development on GCP Cloud Run, improving hot-path latency to 100–400 ms and building a pytest regression suite with 100/100 business-rule validations. Documenting APIs for QA collaboration reinforced how testing and clear specifications protect correctness in high-stakes systems. I also solo-built Community Hero (Google for Developers Vibe2Ship 2026 Global Top 20), owning design through deployment for a map-based civic reporting PWA under tight timelines—debugging root causes and collaborating across feature priorities with product-oriented constraints.

I bring strong problem-solving and communication skills (LeetCode Knight, rating 2048, 711+ solved; Codeforces Specialist, 1419, 252+ solved), familiarity with Git and Agile practices, and a track record of working effectively both independently and on teams. I would welcome the chance to learn from GE HealthCare engineers while contributing to software that supports meaningful patient care. Thank you for your time and consideration.

Sincerely,
Ojas Srivastava
