Wells Fargo Technology Campus Recruiting

Wells Fargo India & Philippines
Bengaluru / Hyderabad, India

Re: 2027 Technology Program Intern (Requisition R-557386)

Dear Hiring Team,

I am applying for the **2027 Technology Program Intern** role in Bengaluru or Hyderabad. I am a penultimate-year **B.Tech Engineering** student in Artificial Intelligence at SVNIT Surat (CGPA **9.20/10**, graduating **May 2028**) and am available for a full-time summer internship from **May through August 2027**. Wells Fargo's emphasis on collaboration, disciplined engineering, and building technology that serves customers at scale aligns with how I have approached internships, hackathons, and production projects.

My qualifications match your desired profile. I bring more than **six months** of demonstrated software experience through my IFFCO internship and shipped systems. At IFFCO, I worked with cross-functional stakeholders across the **SDLC**—translating requirements into **Python/Node.js** services and **SQL**-backed APIs, validating features with **unit and integration testing**, and deploying with **Docker** and **CI/CD**. I applied **secure coding** practices (authentication, input validation, structured error handling) in an environment where reliability and process compliance mattered for daily operations affecting **50+ workflows**.

On **LogiFlow** (Google Solution Challenge 2026 Global Top 106), I co-led backend development on GCP Cloud Run, scaling read paths to **100–400 ms** across 580+ corridors and building a **pytest** suite with **100/100** business-rule validations. I also solo-built **Community Hero** for **Google for Developers Vibe2Ship 2026**, using **Google AI Studio** and deploying a civic reporting PWA on **Cloud Run**. My foundation in **data structures, algorithms, OOP, and DBMS** is reinforced by competitive programming discipline (LeetCode Knight, 2048; Codeforces Specialist, 1457) and campus leadership through ACM SVNIT and Nexus mentoring.

I am drawn to Wells Fargo's structured Technology Program—formal training, workshops, networking, and mentorship—and to contributing on low-to-medium complexity initiatives where I can learn policies, procedures, and engineering standards while delivering dependable results. I communicate technical concepts clearly in English, collaborate well in teams, and welcome feedback from supervisors and peers. I would be grateful for the opportunity to interview and demonstrate how I can add value to your 2027 campus cohort.

Thank you for your consideration.

Sincerely,
Ojas Srivastava
