Education

Bachelor of Technology in Artificial Intelligence (Computer Science and Engineering)

CGPA: 9.20/10

Sardar Vallabhbhai National Institute of Technology (SVNIT), Surat, India

Expected May 2028

- **Relevant Coursework:** Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks (TCP/IP), DBMS, Distributed Systems, Probability and Statistics, Linear Algebra, Machine Learning
- **Target Role:** Software Development Intern, Core Engineering — proprietary low-latency trading systems and simulation tooling

Experience

Software Engineering Intern

IFFCO (Indian Farmers Fertiliser Cooperative), Phulpur Unit, Prayagraj, India

Jun 2025 – Jul 2025

- Designed, developed, and tested production web services on **Linux** through full SDLC: requirements, object-oriented design, implementation, unit testing, and deployment (**Docker**, CI/CD).
- Built **10+ RESTful APIs** with optimized **SQL** (indexing, joins) serving **50+ daily** workflows; debugged production issues and communicated trade-offs to cross-functional stakeholders.

Projects

OA Forge – C++ Online Assessment Judge and Practice Platform

Jun 2026 – Present

C++17, Linux, g++, Next.js, PostgreSQL, Supabase, GitHub Actions

GitHub

- Built hybrid **C++ code judge** with local **g++** compilation (`-std=c++17 -O2`), subprocess sandboxing, and remote fallback — timed mock OA sessions over **14K+** evidence-tracked question occurrences and **5.5K+** test cases.
- Implemented **object-oriented** test harness generation, STL-based I/O parsing, and automated verdict pipelines; primary language for contest-style implementation is **C++**.

LogiFlow – Large-Scale Data and Simulation Platform (Google Solution Challenge 2026, Global Top 106)

Apr 2026 – Jun 2026

C++, Python, FastAPI, Redis, SQL, GCP, pytest, Git

GitHub | Live

- Engineered **latency-aware** read paths (**100–400 ms**) across **580+ corridors** and **9,526 stations** using Redis caching and modular service design — separating hot data access from heavy compute.
- Acquired and modeled **15,650 train-day** operational records; built Gradient Boosting delay simulator (MAE **22.7 min**) with **100/100** pytest regression validations for reproducible strategy-style experimentation.

AirHelp – Real-Time Concurrent Services (PowerMind Hackathon 2026)

2026

Python, FastAPI, WebSockets, NetworkX, ChromaDB, SQL

GitHub

- Shipped **real-time** alert and voice services over **WebSocket** streams with graph-based **A*** routing; profiled and tuned **1–3s** response latency under **50–100 concurrent** connections.

Technical Skills

Programming Languages: C++ (STL, C++17), C, Python, SQL, JavaScript, TypeScript

Software Engineering: Object-oriented design, data structures, algorithms, debugging, code review, unit testing, Agile, clear technical communication

Systems and Performance: Linux/Unix, network programming (TCP/IP, WebSockets), multi-threaded and concurrent applications, real-time programming, distributed computation, low-latency design, Docker, Git, CI/CD

Data and Tools: Redis, MySQL, PostgreSQL, MongoDB, FastAPI, pytest, computational intelligence (ML, feature engineering)

Problem Solving and Interests

- **LeetCode Knight** (rating **2048**, **637** problems, 32 contests) | **Codeforces Specialist** (rating **1457**, **207** solved) — primary implementation language **C++**; LeetCode | Codeforces
- Google Solution Challenge 2026 Global Top 106; Executive Member, ACM SVNIT; Mentor, Nexus SVNIT (DSA and competitive programming)
- Active interest in **financial markets**, systematic trading, and building robust, fast software for data-intensive domains
