Hiring Team

Enterpret
Software Engineering Intern — Backend
Bengaluru, India

Re: Application for Software Engineering Intern (Backend, Onsite)

Dear Hiring Team,

I am applying for the Software Engineering Intern (Backend) role at Enterpret in Bengaluru. I am a penultimate-year B.Tech Artificial Intelligence student at SVNIT Surat (NIT; CGPA 9.20/10, graduating May 2028) and I am ready to work on-site. Enterpret's AI-native customer intelligence platform—messy feedback at scale, serverless systems, real-time analytics—is exactly the kind of hard backend problem I want to own, not observe from the sidelines.

I meet the internship bar you listed: Tier-1 engineering background, a prior SWE internship, and shipped backend + AI work. At IFFCO, I owned production Node.js/Express/MySQL services and 10+ REST APIs that automated 50+ daily workflows, including Docker/CI/CD and debugging real edge cases. On LogiFlow (Google Solution Challenge 2026 Global Top 106), I co-led FastAPI backends on GCP Cloud Run with Redis caching (100–400 ms hot paths) and a 100/100 pytest CI suite. On AirHelp, I built RAG inference paths and load-tested WebSocket services at 50–100 concurrent users; on Community Hero (Vibe2Ship Global Top 20), I solo-shipped an LLM feature to production.

I am eager to sit in system-design discussions, build serverless components on AWS, and help take backend + AI PoCs to production with Enterpret's engineers. I bring LeetCode Knight-level problem solving (peak 2048), clear ownership habits, and humility to learn fast. Thank you for considering my application—I would love to contribute to systems used by teams like Canva and Notion.

Sincerely,
Ojas Srivastava
