Surat, Gujarat | Available for 6-month internship in Bangalore
August 11, 2026

Hiring Team
HARMAN Automotive
Intern — Build & Integration
Bangalore, India

Re: Application for Intern – Build & Integration (R-55075-2026)

Dear Hiring Team,

I am applying for the Intern – Build & Integration role (R-55075-2026) at HARMAN Automotive in Bangalore. I am a penultimate-year B.Tech Artificial Intelligence student at SVNIT Surat (CGPA 9.20/10, graduating May 2028) and I am available for the 6-month fixed-term internship on-site. I am drawn to HARMAN's work on in-vehicle software platforms and want to contribute to reliable builds, integration, and automated delivery.

At IFFCO, I shipped production services with Node.js, Express, and MySQL, using Git for collaboration and Docker with CI/CD before deployment. I debugged broken flows from logs, wrote short handoff docs, and learned how small automation and process discipline reduce release risk—skills I want to deepen on Jenkins, GitHub Actions, and multi-platform build pipelines.

On LogiFlow (Google Solution Challenge 2026 Global Top 106), I co-led multi-service integration: containerized FastAPI backends on GCP Cloud Run, managed Python/TypeScript dependencies across repos, and added a pytest suite (100/100 business-rule checks) in CI so regressions fail before release. I also solo-deployed Community Hero (Vibe2Ship 2026 Global Top 20) to Cloud Run under tight timelines—packaging, config, and smoke validation end to end.

I bring strong Python and shell scripting fundamentals, Git fluency, Docker experience, and a habit of troubleshooting builds systematically. I am eager to learn Android/Linux build systems, GitOps practices, and HARMAN's release-engineering standards while contributing from day one. Thank you for your consideration.

Sincerely,
Ojas Srivastava
