Surat, Gujarat | Available for on-site internship in India (Hyderabad / Bengaluru / Noida)
July 17, 2026

Microsoft University Recruiting

Applied Sciences Intern — India

Job Number: 200041777

Re: Application for Applied Sciences Intern (Job #200041777)

Dear Hiring Team,

I am applying for the Applied Sciences Intern role (Job #200041777) in India. I am a penultimate-year B.Tech Artificial Intelligence student at SVNIT Surat (CGPA 9.20/10, graduating May 2028) in a Computer Science-related field, with at least one academic term remaining after the internship. I am excited to work at the forefront of technological innovation—bringing research to life through data analysis, modeling, and machine learning that improves product quality and business outcomes.

On LogiFlow (Google Solution Challenge 2026 Global Top 106), I mapped a product scenario (route delay risk) to a machine learning task, prepared a large-scale dataset of 15,650 train-days, engineered features, and trained Gradient Boosting models with cross-validation (MAE 22.7 min, 81% within 30 min). I designed an experimental iteration process, implemented prototype inference APIs, and built 100/100 automated data-quality validations—experience directly aligned with analyzing algorithms on datasets, preparing usable modeling data, and scaling feature ideation under quality constraints.

On AirHelp, I built a machine intelligence prototype with RAG semantic search, embeddings, and intent routing, iterating on data preparation and evaluation to improve response quality. At IFFCO, I reviewed operational data for quality issues and documented inclusion criteria before production use. I bring strong algorithms fundamentals (LeetCode Knight, rating 2048, 711+ solved), coursework in machine learning and probability/statistics, and a growth mindset for collaborative research-to-product work at Microsoft.

Thank you for your consideration.

Sincerely,

Ojas Srivastava
