Microsoft University Recruiting

Software Engineering Intern — India

Job Number: 200041085

Re: Application for Software Engineering Intern (Job #200041085)

Dear Hiring Team,

I am applying for the Software Engineering Intern role (Job #200041085) in India. I am a penultimate-year B.Tech Artificial Intelligence student at SVNIT Surat (CGPA 9.20/10, graduating May 2028), which leaves at least one academic term remaining after the internship. I have two years of object-oriented programming experience in C++, Python, Java, and JavaScript/TypeScript, and I am motivated to design, develop, and test next-generation software that empowers every person and organization on the planet to achieve more.

At IFFCO, I applied engineering principles to solve complex operational problems with production software. I partnered with stakeholders to determine user requirements, built and tested 10+ RESTful APIs, and improved availability, reliability, efficiency, and performance for internal users. I delivered in a cooperative team environment with strong time management—using unit and integration testing, code review, feedback, and CI/CD best practices.

On LogiFlow (Google Solution Challenge 2026 Global Top 106), I collaborated with teammates to build cloud-scale software on GCP Cloud Run, quickly adopting new technologies (Redis, Cloud Run) while improving observability and performance to 100–400 ms read paths. I also solo-built Community Hero (Google for Developers Vibe2Ship 2026 Global Top 20), bringing solutions from idea to deployed product under fast-paced constraints with a growth mindset.

I bring demonstrated computer science fundamentals—data structures and algorithms (LeetCode Knight, rating 2048, 711+ solved; Codeforces Specialist, 1419)—and a track record of seeking feedback to improve technical solutions. I would welcome the opportunity to work on real-world projects with Microsoft teams across the world and contribute to software that drives consistency in monitoring and operations at scale. Thank you for your consideration.

Sincerely,

Ojas Srivastava
