Surat, Gujarat | Available for on-site internship in Hyderabad (also Bangalore / Chennai / Noida)

July 17, 2026

Qualcomm India Private Limited — University Recruiting

Interim Engineering Intern — SW

Job ID: 3094028

Hyderabad, Telangana, India

Re: Application for Interim Engineering Intern_2027_SW (Job ID 3094028)

Dear Hiring Team,

I am applying for the Interim Engineering Intern — SW role (Job ID 3094028) at Qualcomm India. I am a penultimate-year B.Tech Artificial Intelligence student at SVNIT Surat (CGPA 9.20/10, graduating May 2028) in a Computer Science Engineering-related technical program. I am excited to design and develop software for Qualcomm's mobile chipsets and cutting-edge connectivity platforms, and I am available for an on-site internship in Hyderabad (also open to Bangalore, Chennai, or Noida).

My foundation aligns with campus engineering intern expectations: strong C/C++ and object-oriented design, data structures and algorithms (LeetCode Knight, rating 2048, 711+ solved; Codeforces Specialist, 1419), operating systems concepts, and computer networks including TCP/UDP/IP from coursework and project work. At IFFCO, I designed, developed, and tested production software on Linux-style deployments, building 10+ RESTful APIs with disciplined testing, debugging, and team collaboration.

On LogiFlow (Google Solution Challenge 2026 Global Top 106), I co-developed performance-critical software with C++/Python components, optimizing hot paths to 100–400 ms across 580+ corridors—experience relevant to platform-level software and efficient resource use. On AirHelp, I built real-time WebSocket services with strict latency targets for 50–100 concurrent users, applying OS-aware concurrency and analytical debugging. I am particularly interested in Qualcomm's work across multimedia technologies, wireless connectivity, platform software, and IoT systems.

I bring excellent analytical and problem-solving skills, good verbal and written communication from ACM SVNIT mentoring, and a self-driven mindset to learn embedded, mobile, and connectivity stacks quickly. Thank you for your consideration.

Sincerely,

Ojas Srivastava
