Cisco India Engineering / EG Hiring Team

Cisco Systems
Bengaluru, Karnataka, India

Re: Software Engineer – Summer Internship (India Engineering)

Dear Hiring Team,

I am applying for the Software Engineer Summer Internship with Cisco India Engineering in Bengaluru. I am a penultimate-year B.Tech Artificial Intelligence student at SVNIT Surat (CGPA 9.20/10, graduating May 2028) with strong computer science fundamentals, two years of hands-on software development, and a track record of building, testing, and deploying applications that scale on the cloud. I am especially interested in the Application Software track, where I can contribute Python and full-stack skills while deepening my understanding of networking-aware, secure, user-centered systems.

At IFFCO, I worked with cross-functional stakeholders through the software development lifecycle: gathering requirements, designing RESTful services, implementing features in Node.js and MySQL, and validating them with unit and integration testing before deployment. I applied secure coding practices including JWT authentication and input validation while automating 50+ daily operational workflows. That experience taught me how to communicate status clearly, incorporate feedback from code review, and debug issues methodically in a cooperative team.

On LogiFlow (Google Solution Challenge 2026 Global Top 106), I co-led UI/UX and backend development on GCP Cloud Run, scaling hot read paths to 100–400 ms across 580+ corridors using Redis caching and progressive HTTP streaming. I built a pytest regression suite with 100/100 business-rule validations—reflecting the testing discipline Cisco emphasizes—and collaborated in an agile environment from requirements through acceptance testing. I also solo-built Community Hero, a mobile-first civic reporting PWA deployed on Cloud Run with Firebase and a six-agent AI pipeline, combining UI/UX design with cloud deployment. At PowerMind Hackathon 2026, I shipped AirHelp with WebSocket real-time alerts and graph-based navigation, achieving 1–3s latency for 50–100 concurrent users through performance tuning and debugging.

My coursework includes Computer Networks (TCP/IP), Operating Systems, Distributed Systems, and Software Engineering. I complement that foundation with competitive programming discipline (LeetCode Knight, 2048; Codeforces Specialist, 1419) and campus leadership through ACM SVNIT and Nexus mentoring. I would welcome the opportunity to learn from Cisco engineers, contribute to projects that make technology accessible across devices, and grow within a culture that values design thinking, secure development, and impact at global scale.

Thank you for your consideration.

Sincerely,
Ojas Srivastava
