Hiring Team

GE HealthCare
Patient Care Solutions
Bengaluru, India

Re: Application for Software Intern (R4041234)

Dear Hiring Team,

I am writing to apply for the Software Intern position with GE HealthCare's Patient Care Solutions team in Bengaluru. I am a penultimate-year B.Tech Artificial Intelligence student at SVNIT Surat (CGPA 9.20/10, graduating May 2028) with two years of object-oriented development in C++, Python, and JavaScript/TypeScript. I am motivated to build reliable software that supports clinicians and improves patient-care workflows, and I am available for an on-site internship in Bengaluru.

At IFFCO, I partnered with cross-functional stakeholders to gather requirements, design software modules, and deliver production web services using Node.js, Express.js, and MySQL that automated 50+ daily operational workflows. I designed 10+ RESTful APIs with optimized SQL schemas, contributed to unit and integration testing, debugged production issues, participated in peer code reviews, and supported CI/CD with Docker—experience across the full SDLC that maps directly to developing, testing, and documenting dependable software in a cooperative team.

On LogiFlow (Google Solution Challenge 2026 Global Top 100), I co-led backend design and development on GCP Cloud Run, achieving 100–400 ms hot-path latency across 580+ corridors. I built a pytest regression suite with 100/100 business-rule test cases and documented API contracts and architecture to support maintainability and QA validation—practices I would bring to healthcare software where correctness and traceability matter. As technical lead on RangRiti, I shipped a full-stack marketplace from requirements through deployment in an Agile team of four.

I bring strong foundations in data structures and algorithms (LeetCode Knight, 2048 rating; Codeforces Specialist, 1419) and a track record of debugging, root-cause analysis, and clear documentation. I would welcome the opportunity to contribute to GE HealthCare's mission of improving lives through meaningful innovation. Thank you for your time and consideration.

Sincerely,
Ojas Srivastava
