Hiring Team
Honeywell
India

Re: Application for Intern

Dear Hiring Team,

I am writing to apply for the Intern role at Honeywell. I am a penultimate-year B.Tech Artificial Intelligence student at SVNIT Surat (CGPA 9.20/10, graduating May 2028) with strong analytical and problem-solving skills and two years of hands-on software development in Python, C++, and JavaScript/TypeScript. I am eager to gain practical experience on real-world projects, collaborate with experienced professionals, and contribute to initiatives that drive innovation and efficiency—aligned with Honeywell's work in automation, industrial systems, and software platforms such as Honeywell Forge.

At IFFCO, I supported cross-functional stakeholders in day-to-day project activities: gathering requirements, conducting research, and delivering production services that automated 50+ daily workflows. I performed data analysis on operational bottlenecks, built 10+ RESTful APIs with optimized SQL for internal reporting, and participated in team meetings, testing, peer reviews, and CI/CD with Docker. This experience taught me how to translate business needs into dependable software in a cooperative team environment.

On LogiFlow (Google Solution Challenge 2026 Global Top 100), I co-led backend development on GCP Cloud Run, building data pipelines and analytics over 15,650 train-days with a gradient-boosting delay model (MAE 22.7 min, 81% within 30 min cross-validation). I also built a pytest regression suite with 100/100 business-rule validations and documented APIs for maintainability—practices I would bring to projects where reliability and clear reporting matter. Separately, I built an automation stack that aggregates and filters internship listings across 965+ companies, combining research, data collection, and scheduled reporting through GitHub Actions.

I bring strong foundations in data structures and algorithms (LeetCode Knight, 2048 rating; Codeforces Specialist, 1419), campus leadership through ACM SVNIT and Nexus mentoring, and a genuine eagerness to learn and take on new challenges. I would welcome the opportunity to contribute to Honeywell's mission of making the world smarter, safer, and more sustainable. Thank you for your time and consideration.

Sincerely,
Ojas Srivastava
