

General Pointers

Resume Building Guidelines

1. Keep It Concise

- Limit your resume to one page
 - Use clear formatting with proper spacing and alignment
 - Avoid unnecessary content or long paragraphs
-

2. Start With a Skills Section

- Place Technical Skills at the top
 - Categorize skills:
 - Programming Languages (e.g., Java, Python)
 - Frameworks/Libraries (e.g., Spring Boot, React)
 - Tools & Technologies (e.g., Git, Docker, MySQL)
-

3. Focus on Projects (Key Section)

- Treat projects as your primary experience
 - For each project, include:
 - Project title
 - Technologies used
 - Your specific contributions
 - Key features implemented
-

4. Show Impact Using Numbers

- Quantify your work wherever possible:
 - Improved performance by X%
 - Reduced latency by X ms
 - Handled X number of users/requests
-

5. Highlight Problem-Solving Skills

- Include coding practice profiles:
 - Platforms like LeetCode, CodeChef, etc.
 - Mention:
 - Number of problems solved
 - Ratings or rankings (if notable)
-

6. Place Education Strategically

- Add education after skills and projects
 - Include:
 - College name
 - Degree and branch
 - CGPA (only if it is decent)
-

7. Add Relevant Links

- Include:
 - GitHub profile
 - LinkedIn profile
 - Portfolio website (if available)
 - Ensure all links are active and updated
-

8. Keep It ATS-Friendly

- Use a simple and clean format
 - Avoid graphics, images, or complex designs
 - Use standard headings:
 - Skills
 - Projects
 - Education
 - Experience
-

9. Customize for Each Role

- Tailor your resume based on the job:
 - Backend roles → APIs, databases, scalability
 - Frontend roles → UI, frameworks, performance
 - AI/ML roles → models, datasets, accuracy
-

10. Common Mistakes to Avoid

- Copy-pasted or unoriginal projects
 - Missing or inactive GitHub links
 - Listing too many irrelevant skills
 - No measurable outcomes
 - Spelling or formatting errors
-

11. Final Checklist

- Resume fits in one page
 - Skills are clearly visible
 - Projects show real work and impact
 - No grammatical or formatting errors
 - Links are working and up to date
-

Key Principle

- Your resume should quickly answer:
“Why should you be hired over other candidates?”

Template Modification

Steps to follow to modify the given template

Finding the right template from Overleaf

- Visit www.overleaf.com
 - Go to templates and find templates for CVs and Resumes
 - In the search bar, search - **resume template by anubhav (if you have your own template then go for it, but ensure it should be single column)**
 - Open this template
-

Modify the Template

- Open this link - <https://www.overleaf.com/read/sxgfhtyndcdv#dc01f6>
 - Copy the latex code of this template and paste in your template
 - Start modifying the text for yourself
-

Summary Section

Write 3-4 lines as a summary about yourself which can include your coding experience, intern experience, college curriculum experience, club participation, hackathon participation etc which you feel act as a differentiating factor and make you unique from others.

Technical Section

Self explanatory

Education Section

Self explanatory

Work Ex Section

If you don't have any work exp, then skip this section.

Project Section

- Include major projects (2-3)
- Highlight your contributions
- Ensure to add github as well as deployment link

Position of Responsibility Section

Self explanatory

Achievement Section

- Add all of your achievements in the field of coding/hackathons/club events etc
- Also add the number of questions you have solved in various coding platforms.
- Add few highlights from your contests like ranks or badges (like knight on leetcode, specialist on codeforces)

Space Handling

- Resume should not have empty spaces
- If after adding everything, there is empty space, then increase the font size and spacing between the lines

ATS Score

- check your ATS score <https://www.toptal.com/techresume/resume-checker>
- this site will give feedback to improve ATS, try to incorporate those feedbacks.
- try to keep the score 85+
