

GE HealthCare + CoCubes OA

Rechecked for a 30-minute invite

Updated Sep 15, 2026 | User-confirmed duration: **30 minutes total**

Sources: CoCubes/HirePro module timings, GFG GE experiences, FACE Prep, SVNIT senior intel

1. Corrected verdict (30 min)

- Your invite duration (**30 minutes**) does **not** match the long historical GE OAs (often 60–120 min with aptitude + MCQs + 2 coding).
- On CoCubes, companies enable **only the modules they want**. A 30-minute slot almost always means **one module** (or one custom short block), not the full six-module employability battery.
- The only CoCubes module whose **standard** duration is exactly **~30 minutes** at the low end is the **Coding** module (usually listed as 30–45 min). Aptitude is usually 45 min; Computer Fundamentals is usually 15 min — companies can still shorten/customize.
- So for a GE + CoCubes + **30 min** invite, the **most likely** formats are below — **read the invite / first screen** to see which one you got.

2. Most likely formats for a 30-minute CoCubes OA

#	Likely format	Why it fits 30 min / what to expect
1	Coding only	CoCubes coding module is officially 30–45 min . Expect 1–2 problems (full default is often 3 Q / 45 min; a 30-min company slot is usually fewer/easier). Languages commonly C / C++ / Java / C# (+ Python on some drives).
2	Aptitude only	Many company Cocubes drives customize aptitude to ~30 Q / 30 min (quant + logical + verbal). Classic Cocubes-style speed test; no coding.
3	Tech / CF MCQs	Default CF is ~15 Q / 15 min , but a company can expand to ~25–30 CS MCQs in 30 min (OOP, DS, OS, DBMS, CN).
4	Mixed short	Less common: e.g. few aptitude MCQs + 1 short coding, or CF + aptitude in one timed block — only if invite says “sections.”

How to know which one in 10 seconds: open the test → if you see a code editor / “Write a program”, it’s #1; if only MCQs with English/quant/logic, #2; if MCQs about OOP/OS/DBMS/code snippets, #3.

3. What does *not* fit a 30-minute total

Do **not** prep as if you will get the old long GE packs in one sitting:

- GFG Off-Campus 2021 (Cocubes-named): aptitude + tech MCQs + **2 coding**, sectional cutoffs — that is a **multi-section** session, typically much longer than 30 min.
- SVNIT senior EID intel: **2 DSA + 20 CS MCQs** — realistic for **~45–90+** min, **tight/unlikely** as a full 30-min package unless coding is tiny.
- PCON EID 2024: **90 min** (reasoning + CS MCQ + 2 Med–Hard coding).
- GFG SVNIT SDE Intern: **~2 hours**.
- EEDP FTE GFG: 50 MCQ / 50 min + 2 coding / 45 min.

Those remain useful for **content** (what GE likes to ask), but they are **not** the format of a 30-minute invite.

4. CoCubes standard module times (for context)

Module	Usual content	Default time
Aptitude	Quant + analytical + English MCQs (often 45 Q)	~45 min
Computer Fundamentals	C/C++, OOP, DS, OS, DBMS, networks	~15 min
Domain	Branch topics	~20 min
Coding	2–3 programming problems	~30–45 min
Written English	Essay	~25 min
Psychometric	Personality	~12 min

Usually **no negative marking**. GE sets its own cutoff for whatever module(s) it enabled.

5. GE content still useful (even if format is short)

If your 30-min slot is **coding-heavy**, practice Easy–Medium:

- Arrays / hashing (Two Sum), strings, prefix sums

- Linked list reverse / basics
- Trees BFS / leaf-sum style
- Easy DP (climbing stairs)

If it is **MCQ-heavy**, prioritize:

- Aptitude speed (percentages, ratios, series, DI, grammar)
- CS flash: OOP pillars, overload vs override, process vs thread, ACID, joins, TCP vs UDP, OSI

6. 30-minute strategy

If coding

1. Minute 0–2: skim all problems; pick easiest first.
2. Aim for **one fully correct** solution before polishing the second.
3. Handle empty/single-element edge cases; print format carefully — Cocubes is picky.
4. Don't burn 25 min on an incomplete hard problem.

If aptitude / CF MCQs

1. ~1 min per question budget; skip and return.
2. Guess remaining at end if no negative marking.
3. For CF: code-output / OOP conceptual questions are common eliminators.

7. Proctoring (unchanged)

Expect webcam / AI flags (tab switch, second face, phone in frame). A 30-min test is still proctored — integrity risk remains.

8. Bottom line for *your* invite

- **Duration:** 30 minutes total (confirmed by you).
- **Most probable CoCubes interpretation:** coding-only **or** aptitude-only (custom company config) — **not** the full historical GE 3-part marathon.
- **Action:** check invite text for words like *Coding*, *Aptitude*, *Technical*, *Computer Fundamentals*. Prep both light coding + speed MCQs until the first screen confirms.

If you paste the invite wording (section names / languages / question counts), this brief can be narrowed to a single exact format.
