Summer 2027 Intern — Software Engineer AMTS (JR337715) | Class of 2028 | Futureforce

B.E./B.Tech (Circuit Branch / Computer Science-related): Artificial Intelligence, SVNIT Surat | CGPA 8.75/10

Preferred locations: India — Bangalore, Hyderabad | Office-Based | Full time internship

Professional Summary

Class of 2028 Futureforce candidate — penultimate-year B.Tech student in a Computer Science/Information Technology/Circuit Branch-eligible program (Artificial Intelligence) at SVNIT Surat, graduating May 2028. Self-starter with strong self-motivation, analytical and problem-solving skills; thrives in a fast-paced Scrum environment. Academic and internship experience designing, developing, testing, and deploying software products and distributed systems / cloud services (C++, Python; HTML, CSS, JavaScript, React). Strong Computer Science fundamentals: object-oriented design, data structures, algorithm development, problem-solving, complexity analysis, SQL and relational database concepts. Effectively communicates technical challenges and proposes solutions; skilled at navigating ambiguous / undefined problems. Eager to contribute optimized code, automated testing, and tools to monitor cloud services on a Salesforce Scrum team (Customer 360 / enterprise cloud) in Bangalore or Hyderabad.

Education

Bachelor of Technology (B.E./B.Tech) in Artificial Intelligence — Circuit Branch / CS-related

CGPA: 8.75/10

Sardar Vallabhbhai National Institute of Technology (SVNIT), Surat, India

2024 – 2028

- **Eligibility match:** Enrolled sophomore year or higher; working towards B.E./B.Tech in Computer Science / Information Technology / Circuit Branch pathway; graduating 2028
- **Relevant Coursework:** Data Structures & Algorithms (algorithm development), Object-Oriented Design, Software Engineering, DBMS/SQL/relational databases, Operating Systems, Linux, Machine Learning

Professional / Internship Experience

Artificial Intelligence Intern

Remote

Personify

Mar–Apr 2025

- Collaborated with mentors to design, develop, test, and deploy TensorFlow models (text classification, object detection, pet-face classification) — software iteration in a fast-paced environment.
- Owned preprocessing, training, and evaluation pipelines from raw inputs to measurable outputs; communicated technical challenges and proposed fixes during model debugging.

Projects (Academic / Professional Software Engineering)

LogiFlow — Multi-Modal Logistics Platform (Google Solution Challenge 2026)

2026

Python, FastAPI, TypeScript, React/Next.js, Redis, SQL, SSE, GCP Cloud Run

GitHub | Live

- Full-stack owner of Route Composer, rail pipeline, and SSE streaming on a distributed systems / cloud pipeline (GCP Cloud Run + Vercel) — designing, developing, testing, and deploying live progress updates.
- Built modules that normalize multi-pipeline results into one schema with priority-weighted scoring and Pareto ranking; shipped optimized decision-intelligence flows with plain-language AI route explanations.
- Practiced API contracts, feature scoping, and production debugging on Cloud Run / Vercel — habits aligned with high-quality cloud product releases and monitoring-ready services.

Community Hero — Civic Reporting PWA (Google for Developers Vibe2Ship 2026, Global Top 20)

Jun 2026

HTML, CSS, JavaScript, React, TypeScript, Express, Firebase, GCP / Vercel

GitHub | Live

- Shipped user-facing civic reporting PWA with HTML/CSS/JavaScript/React frameworks, REST APIs, and cloud deploy; quickly learned new technologies (Maps, Firebase) under ambiguous, fast-paced constraints.
- Built report intake, map-based visualization, and community verification flows — end-to-end testing and deployment of a production-style cloud service.

EasyBook — Movie Ticket Booking Platform

2025

HTML, CSS, JavaScript, React, Node.js, Express, MongoDB

Live

- Designed, developed, tested, and deployed a MERN booking app (browse, theater listings, trailers, seat selection, auth) with a responsive React UI and modular frontend/backend separation on Vercel.

Technical Skills (Required + Desired)

Programming languages: C++, Python; JavaScript, TypeScript, SQL, C

Web development technologies & frameworks: HTML, CSS, JavaScript; React (modern SPA frameworks); Next.js, Node.js, Express, FastAPI, Django

Databases: Coursework and hands-on SQL and relational database concepts; MongoDB, Redis

Computer Science fundamentals: Object-oriented design, data structures, algorithm development, problem-solving, complexity analysis, distributed systems

Cloud, quality & ownership: Cloud services (GCP Cloud Run, Vercel), Git, production debugging, SSE / live service updates, tools to monitor streaming routes, Scrum collaboration

Achievements and Leadership

- **Google Solution Challenge 2026** — LogiFlow (Neural Foundry; Route Composer, rail, SSE); **Vibe2Ship 2026** — Global Top 20 (Community Hero)
- Core Member, Bureau of Indian Standards (BIS) Student Chapter, SVNIT Surat — campus standards awareness and chapter delivery
