

Adobe University Hackathon 2026

Round 2 Prep: Case Study on Brand Visibility

Theme: Speak to Agents - The New Language of Brand Visibility
Source: Unstop listing + Adobe Brand Visibility product docs | Prep date: 15 Aug 2026
Unstop: <https://unstop.com/hackathons/crp-adobe-university-hackathon-2026-adobe-1715333>

Exact Round 2 questions are not public yet. This brief consolidates confirmed format details and high-probability content based on the official theme and Adobe Brand Visibility (GEO).

1. What Round 2 Officially Is

Name	Round 2 - Case Study on Brand Visibility
Date	16 August 2026
Who	Shortlisted participants from Round 1 (Online Assessment)
Format	Analyse a real-world brand visibility scenario + answer questions
Time	45 minutes, one sitting (timer expires = done)
Attempts	One only
Judged on	Analytical thinking, strategic approach, actionable insights

Note on numbering: Older Internshala/LinkedIn posts call Development Round 2. On the live Unstop page, Round 2 is the case study; Development is Round 3.

2. What Will Almost Certainly Be Inside

Adobe recently launched Adobe Brand Visibility (GEO / AI-search visibility). The case will almost certainly sit in that product world - not generic marketing fluff.

Expected scenario shape

Brand X is strong on Google SEO but weak, invisible, or misrepresented when users ask ChatGPT, Perplexity, Gemini, Copilot, or Google AI Mode questions like 'best CRM for startups' or 'best travel insurance'. Competitors get recommended. Your job: diagnose and fix visibility in the agent era.

You will likely get a short brief (maybe fake metrics, competitor table, or sample prompts) plus open-ended written questions.

Likely question themes (~4 questions)

1. Diagnose the problem

Why is the brand invisible or wrongly described in AI answers? SEO vs GEO gaps, crawl blocks, stale content, weak third-party mentions, JS-heavy pages AI cannot read.

2. Metrics and analysis

What would you measure? Mentions, citations, sentiment, position in the answer, visibility score, share of voice vs competitors, agentic traffic, referral traffic from AI.

3. Strategy / recommendations

Onsite: robots/CDN for AI bots, natural-language FAQs, structured content, freshness. Offsite: Wikipedia, Reddit/Quora, PR, reviews, YouTube. Prioritize: Analyze -> Plan -> Act -> Adapt.

4. Product / tech angle (Adobe-flavored)

How would you use Brand Visibility / agents to monitor prompts, close citation gaps, deploy fixes fast, prove ROI in analytics - or how a tool/agent could help marketers speak to agents.

They score structure + insight + concrete actions - not buzzwords.

3. Concepts to Lock Before 16 Aug

From Adobe Brand Visibility best practices (Experience League):

- GEO / AEO / AIO = win citations inside AI answers, not only blue-link SEO.
- Core metrics: Mentions, Citations, Sentiment, Position -> Visibility score.
- Agentic traffic = AI bots crawling your site (often deep pages, not the homepage).
- Zero-click = user gets the answer in chat without visiting you; influence is not equal to clicks.
- SEO vs LLM: links vs brand mentions; limited JS rendering for agents; freshness + earned media matter more.
- Optimization loop: onsite + offsite; Analyze -> Plan -> Act -> Adapt.
- Platforms to name: ChatGPT, Perplexity, Gemini, Copilot, Google AI Mode.

4. How to Answer in 45 Minutes

For each question, use this tight frame:

- 1. Restate the goal in one line.
- 2. List 2-3 root causes.
- 3. Give prioritized actions (quick wins vs long-term).
- 4. Say how you would measure success.
- 5. Add one Adobe / agent angle if it fits.

Write clear, bullet-friendly paragraphs. Sound like a PM/analyst, not a thesaurus. Aim for structured answers you can finish under time pressure.

5. Cheat Sheet: SEO vs LLM / GEO

SEO	LLM / GEO
Index-based	Token-based + RAG for freshness
Link authority matters	Brand mentions matter more
JS rendering supported	Very limited client-side JS for agents
Win page-one rankings	Win AI citations and answer presence
Traffic via clicks	Often zero-click influence + agentic crawl

6. Onsite vs Offsite Actions (Quick Recall)

Onsite

- Allow AI agents in robots.txt / CDN settings; fix blocked URLs.
- Refresh 10-15% of content regularly; use clear H1/H2/H3 structure.
- Add conversational FAQs mapped to real user prompts.
- Track visibility score, sentiment, citation frequency; iterate.

Offsite

- Keep Wikipedia accurate, sourced, and neutral.
- Earn mentions via Reddit/Quora, reviews, affiliates, news/PR, YouTube.
- Diversify footprint; monitor citations and competitor share of voice.

- Coordinate PR + social so third-party sources LLMs trust mention you.

7. Bottom Line

Nobody online has the real Round 2 paper yet - it goes live for shortlisted people on 16 Aug 2026. What is confirmed: 45-minute, one-shot brand-visibility case under the Speak to Agents theme, graded on analysis + strategy + actionable insights, tightly aligned with Adobe Brand Visibility / GEO.

Prep goal: walk in able to diagnose AI-visibility gaps, pick the right metrics, propose prioritized onsite/offsite fixes, and sound product-aware about agents and Adobe.
