

Adobe University Hackathon 2026

Case 06 | VoltRide (EV scooters)

EV brand wins SEO keywords but loses 'should I buy' AI advice prompts

Industry: EV / Automotive retail | Theme: Speak to Agents - Brand Visibility

Practice paper | Timebox 45:00 | Suggested: read 5 | Q1-Q4 as marked | buffer 2

Unofficial - for team practice only. Official Round 2 may differ.

Scenario

VoltRide sells electric scooters online + via dealers. Category SEO is strong for 'best electric scooter under 1 lakh'. Spec sheets rank. Showroom footfall from Google is okay.

However, advice-style prompts like 'is VoltRide good for daily 30km commute', 'VoltRide vs Ather for college students', 'real world range VoltRide monsoon' get answers that cite YouTube long-form reviews of competitors and a critical Reddit thread about VoltRide charger failures (old batch, fixed).

Case facts / data

- Mention 35% (decent) but citation 12% (weak). Position often mid-answer.
- Sentiment 0.05 overall; negative spike on battery/charger prompts.
- Official range claims are on PDPs; independent test data is not linked. Service center list is a PDF.
- Competitor citations come from detailed comparison blogs + owner forums.
- VoltRide YouTube exists but transcripts are sparse; no chaptered 'commute test' videos optimized as citable sources.
- Agentic bots successfully fetch PDPs (80% success) but rarely hit /support/charger-recall-faq (almost unknown URL).
- Dealer pages vary wildly in quality; many are thin and duplicate.

Questions

Question 1 (8-10 min)

VoltRide is mentioned often but not trusted/cited. What does that pattern mean, and which 3 actions raise citation quality (not just mention count)?

Question 2 (8-10 min)

Design an onsite 'evidence pack' for the commute/range prompt cluster that LLMs can quote accurately (what pages, what proof, how often refreshed).

Question 3 (8-10 min)

How would you neutralize the outdated charger-failure narrative without deleting legitimate criticism? Include offsite and onsite steps.

Question 4 (8-10 min)

Propose a student-hackathon-friendly agent that monitors EV 'consideration' prompts weekly and opens tickets for content/PR owners. List must-have features for a prototype.

Answer frame (use on every question)

- One-line bottom line first
- 2-3 causes tied to case facts (do not invent numbers)
- Prioritized actions: quick wins vs later bets
- Metrics / how you know it worked
- Optional one-line Adobe / agent angle if it fits

Judged on: analytical thinking, strategic approach, actionable insights. Write like a sharp student analyst under time pressure - specific, not buzzwordy.

Team tip: attempt alone under timer, then compare notes. Focus debate on prioritization and metrics - not who wrote longer answers.
