

GE HealthCare HireVue Prep

~5 questions | 30–60s think | 3 recording attempts each | Senior SVNIT 2025

How HireVue works here

- Browser-based recorded interview (no live human)
- Short prep time, then you record video/audio answer
- **3 attempts** per question — use attempt 1 as rehearsal if needed
- AI/human reviewers score clarity, structure, confidence

Setup checklist

- Plain background, face well-lit, camera at eye level
- Quiet room; phone on silent
- Business casual (collared shirt)
- Bullet notes on sticky note **off camera** — don't read verbatim
- Speak 90–120 seconds max per answer unless prompt says shorter

Question bank + scripts

3.1 1. Tell me about yourself. (60–90 sec)

Good morning. I'm Vansh Rawat, second-year B.Tech Artificial Intelligence at SVNIT Surat with a CGPA of 8.0. I'm a full-stack developer focused on Python and Django — I built EduAce, an AI-assisted study platform, and Beneath The Blue, a conservation awareness web app with authentication and interactive quizzes. I led a team of four in the Web Wonder program as a finalist, where I owned task planning and our final demo. I'm also a departmental representative at Nexus, where I coordinate technical events for CSE and AI students. I'm applying to GE HealthCare's EID program because I want to work on software with real-world impact in healthcare, and I'm ready to learn from experienced engineers on live product teams.

3.2 2. Why GE HealthCare? (45–60 sec)

GE HealthCare sits at the intersection of engineering and patient outcomes — software here isn't just features, it's reliability in environments where mistakes matter. The EID program gives hands-on work on live engineering priorities with a clear pathway to EEDP, which fits how I learn: ship, get feedback, improve. I've already built and deployed full-stack projects end-to-end; I want that same ownership mindset inside a medical-technology company where testing and quality are taken seriously.

3.3 3. Why software / why this internship? (45 sec)

I chose software because I like owning a problem from idea to deployment. In my projects I handled backend logic, authentication, UI, and deployment — not just assignments. This internship is the next step: working on a real engineering backlog, learning professional practices like code review and testing, and contributing to healthcare technology I can be proud of.

3.4 4. Greatest strength? (45 sec)

My strength is structured ownership under deadlines. As Web Wonder team lead, I split features across four people, set integration checkpoints, and we reached the finalist stage with a deployed demo. I don't wait for perfect specs — I clarify, build, and iterate. That same habit helped me ship EduAce and Beneath The Blue to production on Render.

3.5 5. Tell me about a challenge. (STAR, 90 sec)

Situation: In Web Wonder, we had two weeks to deliver a full Django app with auth and quizzes.

Task: I was team lead and the only member strong on backend integration.

Action: I mapped features to owners, built the auth and quiz API first so frontend could parallelize, and ran daily 15-minute syncs. When quiz scoring had edge-case bugs, I added validation on both client and server.

Result: We deployed on time, reached finalist, and I learned to front-load integration risk instead of leaving it for the last day.

3.6 6. Why healthcare / medical technology? (optional)

Healthcare software has to work for diverse users and fail safely. That discipline appeals to me — clear requirements, testing, documentation. I'm not from a clinical background, but I care about building tools that help people, and GE HealthCare is where that impact is measurable at scale.

Practice drill

1. Record each answer once — watch without sound (body language check)
2. Record again — aim for **no filler** (um, basically, like)
3. Third pass — time each answer; cut if over 2 min

Avoid

- Memorized robotic delivery — use bullets, not script
- Badmouthing college/teammates
- “I just need any internship” — show GE-specific motivation
- Reading from screen — eyes darting kills HireVue scores
