

# GE HealthCare — what people were asked

GFG + senior SVNIT + repo intel. No invented questions.

**Labels.** **Confirmed** = multiple reports. **Repeated** = 2+ reports. **One-off** = single post — useful, not a promise.

Full links: `sources/SCRAPED_SOURCES.md`

## 1. Process map (SVNIT-style, 2024–2025)

- **5 rounds** reported by senior + EEDP FTE write-ups: OA → HireVue → Tech → HR → Personality. **Confirmed**
- EEDP summer intern at SVNIT (Aug 2024): CGPA > 7; CSE/ECE/Electrical eligible; 2-month internship.
- Stipend EID 2027 form: **INR 40,000/month**, 8 weeks; PPO pathway to EEDP + 6-month spring intern.
- Location: often **Bengaluru** (JFW Technology Centre) for software tracks.

## 2. Senior SVNIT — 2025 (highest signal for your batch)

**Round 1 — OA. 2 DSA + 20 MCQs** CS fundamentals (OS, DBMS, CN, OOP).

**Round 2 — HireVue.** ~5 recorded Qs; 30–60s think time; **3 attempts** each. Intro, why GE, etc.

**Round 3 — Technical. Panel-dependent.** Senior: 75 min. Mostly **logic**, not always live hardcoding. Heavy **project** depth (accuracy, architecture, improvements). One panel: **design testing software** (hints given).

**Round 4 — HR.** ~15 min. Hobbies, clubs, teamwork.

**Round 5 — Personality.** 100 situational (untimed) + 3 timed puzzle games (simple).

**Prep:** GFG fundamentals; Striver DSA; every resume project cold.

## 3. PCON — EID Intern 2024 (named EID role)

**OA (90 min, 3 sections).** Reasoning + CS MCQs (OOP, CN, OS) + **2 Med–Hard coding** (trees / graphs / DP).

**Technical (45–60 min).** Intro → DSA + CS fundamentals.

**Two Sum** and **Sum of Leaf Nodes** — must implement using **OOP concepts** (classes/methods), not bare functions.

Then DBMS, OS, OOP fundamentals.

**HR.** Strengths/weaknesses with reasons; challenges during college semesters.

**Tip from selected candidate:** implement interview coding with OOP; ask interviewer questions; know company values.

PCON EID Intern 2024 write-up

#### 4. GFG — SDE Intern, SVNIT Aug 2024

**OA (2 hr).** Coding + English + logical reasoning + aptitude. **Coding unique per student.**

**248-digit problem:** count numbers in  $[1, n]$  where digits 2, 4, 8 appear with equal **nonzero** frequency.

**One-off**

**Pencils:** min height after cut operations on pencil lengths. **One-off**

Peers also saw: zig-zag tree traversal, Euler cycle.

**Technical (30 min).** C++ OOP: copy constructor, virtual functions, overriding. MERN projects.

**ChatGPT uses which type of ML?**

**HR.** Competitors, relocation, GE products. **Rejected at HR** despite clearing tech — take HR seriously.

#### 5. GFG — On-Campus SVNIT (on-campus-3)

**OA.** Math + DSA MCQ + English + **2 coding** (one easy, one **DP**).

**Technical (30–35 min).** Expected MERN deep-dive; got **3 DSA** instead:

**All diagonals of  $N \times N$  matrix** **LL insert & delete** math problem.

Then OOP, DBMS (ACID), Java polymorphism compile vs runtime.

**HR.** Strengths/weaknesses, why GE HealthCare, challenge STAR story.

#### 6. GFG — EEDP FTE On-Campus (5 rounds)

**Round 1.** 50 MCQs (OOP, DBMS, OS, CN, aptitude) in 50 min + 2 coding in 45 min.

**Round 2.** Pymetrics personality games (similar to situational + games).

**Round 3 — Technical (up to 90 min).** Why GE; **implement runtime polymorphism live**; implement vector (with hints); **OSI 7 layers in depth**; Fibonacci; DB normalization; race conditions & locks; threads vs processes; project questions.

**Round 4 — Manager.** GE website research; hobbies; technologies worked on.

**Round 5 — HR.** Projects; why GE; prove teamwork with example; other offers.

#### 7. GFG — Off-Campus 2021 (Cocubes)

**OA (3 sections, one sitting).** Aptitude + logical + grammar → technical MCQs → **2 coding**. Must clear cutoff per section.

**Technical.** CRUD; OOP with **live examples**; array reverse; stack/queue; tree traversals; prefix/postfix; REST/JSON vs XML; JDBC; 3-tier architecture; OSI; DHCP.

**Manager.** Project every detail; hackathon X-factor; SQL **third highest salary**; DevOps early-release scenario; IPv4 vs IPv6; cloud SaaS/PaaS/IaaS. *“Every line of code touches 250M lives”*.

**HR.** GE history (Edison); career domain; compensation.

## 8. InterviewSense — SE Intern Summer 2026 (US signal)

Not India campus — still useful for **coding pattern** rehearsal.

**OA / coding.** 2 LC-medium in ~70 min. Reported: **longest substring without repeating characters**, **group anagrams**, **merge overlapping intervals**, sliding-window follow-ups.

**Light system design.** Rate limiter; notification fan-out — know failure modes, not enterprise architecture.

InterviewSense SE Intern Summer 2026

## 9. Repo intel — recurring OA / PI probes

- MCQ: TCP/IP, OOP, normalization, indexing. **Repeated**
- Coding: Two Sum (hash map); array manipulation; tree level-order. **Repeated**
- PI: OOP encapsulation/inheritance/polymorphism + **code it**. **Confirmed**
- PI: Deep project walkthrough; demo link broken? error handling. **Repeated**
- SDLC, unit vs integration testing, regulated-environment mindset (medical-adjacent software). **Repeated for SW intern JDs**

## 10. What to prepare (priority order)

1. **Resume projects** — workflow, auth, backend logic, improvements (see [GE\\_Project\\_Drill1.pdf](#))
2. **DSA logic** — Striver Easy/Medium; explain approach before code
3. **CS fundamentals** — OOP (code), OS, DBMS, CN (GFG MCQ sets)
4. **HireVue scripts** — intro, why GE, why healthcare (see [GE\\_HireVue\\_Prep.pdf](#))
5. **HR** — clubs (Nexus), Web Wonder team lead, teamwork STAR
6. **Personality games** — stay consistent; don't overthink situational section

## 11. Interview tactics

- **Drive toward strengths:** mention Django auth, quiz logic, team leadership early.
- **Logic > syntax:** narrate approach; ask clarifying questions.
- **OOP + DSA:** if asked to code Two Sum / tree sum, wrap in a class (EID 2024 pattern).
- **Stuck on design?** Think aloud; ask for hints — senior's interviewer helped.
- **Don't assume live demo** — but know URLs and 2-min demo script anyway.
- **Healthcare angle:** reliability, testing, clear documentation — even without PHI data.
