

GE HealthCare: OA & Interview Cheat Sheet

Print — desk reference for OA through HR

Vansh Rawat | EID 2027 Software | SVNIT AI | LeetCode Rawat_987

1) Five-round map (senior + GFG)

- **R1 OA:** 2 DSA + ~20 CS MCQs (OS, DBMS, CN, OOP) — also seen: aptitude, English, 50 MCQ variants
- **R2 HireVue:** ~5 Qs, 30–60s think, 3 record attempts — intro, why GE
- **R3 Tech:** 30–75 min, panel-dependent — projects + DSA logic + OOP + fundamentals
- **R4 HR:** ~15 min — hobbies, clubs, teamwork, why GE
- **R5 Personality:** 100 situational (untimed) + 3 timed puzzle games

2) OA — coding patterns (Easy–Medium)

Arrays	Two Sum (hash), Kadane, prefix sum, merge intervals, buy/sell stock
Strings	First unique char, anagram / group anagrams, valid parens, longest substring no repeat
Linked list	Reverse, insert/delete, cycle detection
Trees	Level-order BFS, zig-zag, sum of leaf nodes , BST insert/delete
Graphs	BFS/DFS islands, Euler path (one-off)
DP	Climbing stairs, easy 1D DP
Math / recursion	Sieve primes <100, Fibonacci, digit counting (248), Tower of Hanoi
EID twist	Implement Easy DSA inside OOP classes (Two Sum + leaf-sum — PCON 2024)

3) OA — CS MCQ flash (GFG)

- **OOP:** 4 pillars; overloading vs overriding; virtual functions; copy ctor
- **OS:** process vs thread; deadlock (4); mutex vs semaphore; paging
- **DBMS:** ACID; 1NF–3NF; PK/FK; INNER vs LEFT JOIN; index = faster read, slower write
- **CN:** OSI layers; TCP vs UDP; 3-way handshake; DHCP, DNS
- **DSA theory:** stack LIFO, queue FIFO; BST property; BFS vs DFS use-cases

4) Kadane + Two Sum (dry-run) + OOP wrap

- **Kadane:** [-2,1,-3,4,-1,2,1,-5,4] → max = **6**, subarray [4,-1,2,1]
- **Two Sum:** one pass hashmap of **target - x**; O(n) time O(n) space
- **EID OOP:** class TwoSumSolver{solve(nums,target)}; class TreeNode + leafSum(root)
- **First unique char:** freq map, two passes; or single pass with ordered dict

5) OOP — speak + code

- **Encapsulation** hide data (private fields + public methods)
- **Inheritance** reuse (Django models / class hierarchy)
- **Polymorphism** same interface, different behavior (runtime via virtual/override)
- **Compile-time** overload; **runtime** override — EEDP FTE asked **implement live**
- Tie to **Beneath The Blue:** User model, auth views, quiz classes

6) OS / DBMS / CN one-liners

- **Race condition:** two threads read/write shared data — fix with mutex/lock
- **Normalization:** reduce redundancy; 3NF removes transitive dependency
- **SQL:** SELECT * FROM t ORDER BY sal DESC LIMIT 1 OFFSET 2 (3rd highest trick)
- **3-tier:** presentation (React/HTML) → business logic (Django) → data (MySQL)
- **REST:** JSON over HTTP; GET read, POST create, PATCH update

7) Technical interview — project drill

- **Workflow:** user signs up → login → action → DB → response
- **Auth:** Django session/auth; password hash; protected views
- **Quiz logic:** generate Qs, score, store attempts
- **Improve:** unit tests (pytest), API validation, rate limits, error pages
- **Testing software design (senior):** unit → integration → E2E; mock DB; CI on push
- **AI angle:** supervised vs unsupervised; how you'd measure accuracy; fallback if model wrong

8) HireVue bullets (60–90s each)

- **Intro:** SVNIT AI, CGPA 8, full-stack Django projects, Web Wonder Team Lead Finalist, Nexus rep
- **Why GE:** healthcare software with real impact; EID live project + EEDP pathway; engineering rigor
- **Strength:** team lead — task split, deadlines, demo delivery
- **Challenge STAR:** pick one bug/deadline story from Web Wonder or EduAce deploy

9) HR + personality

- Hobbies, clubs, teamwork — Nexus + Web Wonder
- Know 1–2 GE products (MRI, patient monitoring, ultrasound)
- Competitors: Siemens Healthineers, Philips Healthcare (high level)
- Personality test: **consistent** answers; games — read fast, stay calm

10) Day-of checklist

- Stable internet, webcam, quiet room, charged laptop, resume PDF open
- Warm up: 1 Easy + Kadane dry-run on paper
- Live URLs ready: EduAce, Beneath The Blue, GitHub, LeetCode
- Mostly **logic** — still know OOP syntax for surprise live coding
