

GE HealthCare EID — Prep Roadmap

Companion: `GE_Question_Practice_Roadmap.pdf` (if created) | Sources: `sources/SCRAPED_SOURCES.md`

1. What you're preparing for

Edison Internship Development (EID) 2027 — Software (SW).

8-week summer internship; INR 40k/month; high performers considered for PPO into **EEDP**.

Likely pipeline (SVNIT 2025 senior + GFG 2024–25):

1. OA (2 DSA + CS MCQs)
2. HireVue (recorded behavioral)
3. Technical (projects + DSA + fundamentals)
4. HR (15 min)
5. Personality assessment (situational + games)

2. Priority matrix

Priority	Topic	Resource
MUST	Striver Easy/Medium DSA	Striver SDE sheet
MUST	OS, DBMS, OOP, CN MCQs	GeeksforGeeks
MUST	EduAce + Beneath The Blue deep-dive	GE_Project_Drill.pdf
MUST	HireVue scripts	GE_HireVue_Prep.pdf
SHOULD	OOP live coding (polymorphism)	C++ or Python classes
SHOULD	Testing / SDLC vocabulary	Cheat sheet S7
SHOULD	GE company research	gehealthcare.com

3. 5-day crash plan (if OA is soon)

3.1 Day 1 — OA coding

- Striver: Arrays (Two Sum, Kadane, prefix sum), Strings (first unique, anagram)
- 2 timed mocks: 45 min each, 2 problems
- Read `GE_OA_Interview_Cheat_Sheet.pdf` once

3.2 Day 2 — CS fundamentals MCQ

- GFG: OOP, OS, DBMS, CN — 30 MCQs each topic
- Flash: ACID, deadlock, OSI layers, JOIN types

3.3 Day 3 — Projects

- Complete `GE_Project_Drill.pdf` out loud
- Draw 3-tier architecture for EduAce and Beneath The Blue
- Prepare “how to improve” and “testing strategy” for each project

3.4 Day 4 — HireVue + HR

- Record 5 HireVue answers on phone (3 takes each)
- HR: hobbies, Nexus, Web Wonder teamwork story
- Research 2 GE HealthCare products + 1 competitor

3.5 Day 5 — Mock + rest

- 60-min mock: 10 min intro/projects, 20 min DSA logic, 15 min OOP/OS/DBMS, 15 min HR
- Light review only; sleep well before OA

4. Technical round — question types to rehearse

- Explain project workflow end-to-end (2 min each project)
- Django auth: login, session, protected routes
- DSA: matrix diagonals, LL ops, tree BFS — **explain logic first**
- OOP: inheritance + polymorphism with code sketch
- DBMS: ACID, normalization, simple SQL
- OS: thread vs process, deadlock, race condition + lock
- Design: testing tool / 3-tier / API — think aloud, ask hints
- ML lite: supervised vs unsupervised; ChatGPT = generative LLM (not hard ML math)

5. Striver sheet — minimum set

Arrays: Two Sum, Max Subarray, Contains Duplicate, Move Zeroes

Strings: Valid Anagram, First Unique Character, Valid Parentheses

Linked List: Reverse, Merge Two Lists

Trees: Level Order, Max Depth

DP: Climbing Stairs

Graph: Number of Islands (BFS/DFS)

6. Links

- LeetCode: https://leetcode.com/u/Rawat_987/
- EduAce: <https://eduace.onrender.com/>
- Beneath The Blue: <https://beneath-the-blue-1-3c6o.onrender.com/>
- GitHub: <https://github.com/Vansh-ai406/>

7. Do NOT skip

- HR round — SVNIT 2024 report: cleared tech, rejected HR
- Personality consistency — don't game situational tests
- Panel variance — prepare fundamentals even if you expect project-only
