PROFESSIONAL SUMMARY

Aspiring Full Stack Developer and AI Undergraduate with hands-on experience across the **MERN/Next.js stack** and **Applied AI/ML**, building end-to-end products that integrate LLMs, NLP pipelines, and modern web frameworks.

Smart India Hackathon (SIH) University-Level Qualifier who developed full-stack, AI-driven platforms like an AI medical triage system and a multilingual social-media threat analyzer applying LLMs, transformer models, and RAG in real-world scenarios.

Focused on expanding technical expertise across Web Technologies and Machine Learning, and contributing to engineering teams through continuous learning and practical application.

TECHNICAL SKILLS

Programming Languages: Python, C, C++, JavaScript, TypeScript

Web Development: React, Next.js, Node.js, FastAPI, Tailwind CSS, REST APIs

AI/ML & Data: NumPy, Pandas, Scikit-learn, LangChain, NLP, RAG

Core Concepts: Data Structures & Algorithms (DSA)

Databases: SQL, PostgreSQL, Supabase (pgvector)

Tools & Version Control: Git, GitHub

RESEARCH EXPERIENCE

Undergraduate Researcher

Present

Guide: Dr. Rahul Shrivastava, NIT Surat

Surat, India

- Conducting guided research on **multi-stakeholder recommender systems**, studying how recommendation quality can be balanced across multiple parties (users, providers, and platform) rather than optimizing for a single objective.
- Reviewing current research literature and analyzing collaborative and content-based filtering approaches to improve fairness, relevance, and overall system performance.

PROJECTS

MediGuide | Next.js, TypeScript, Supabase, LLMs (Llama/Gemini), RAG

[GitHub Link](#)

- Built a full-stack AI medical triage and doctor-consultation platform where patients describe symptoms in natural language and an AI assistant classifies urgency with instant red-flag emergency detection.
- Implemented a **RAG-grounded medical Q&A** system over an ingested MedlinePlus/WHO corpus using pgvector similarity search and Gemini embeddings, with inline source citations to prevent hallucinated answers.
- Engineered role-based dashboards (patient/doctor/admin) with appointment booking, payments, real-time chat, and explainable deterministic doctor matching.

SENTINEL — Sentiment Analysis | Python, FastAPI, PyTorch, Transformers, React

[GitHub Link](#)

- Developed a real-time multilingual social-media threat and sentiment analyzer for law-enforcement use, with first-class NLP support for Gujarati, Hindi, Hinglish, Gujlish, and English.
- Fine-tuned **MuRIL transformer models** on 50k+ rows from 22 real public datasets for sentiment and threat classification, achieving a measurable accuracy gain over classical TF-IDF baselines.
- Built the end-to-end pipeline (ingestion, NLP scoring, spike/bot-cluster detection, alerting, and PDF reporting) with a FastAPI + WebSocket backend and a React dashboard.

CERTIFICATIONS & ACHIEVEMENTS

Elements of AI – University of Helsinki & MinnaLearn (Oct 2025) | [Verify Credential](#)

AI Fluency for Students – Anthropic Academy (2025) | [Verify Credential](#)

Qualifier – Smart India Hackathon (SIH), University Level | Selected for the internal round of the national hackathon.

Participant – TechnoVision No-Code Hackathon (WPU CSI, Nov 2025) | Built rapid prototype solutions using no-code tools.

EDUCATION

Sardar Vallabhbhai National Institute of Technology, Surat

2024 – 2028

B.Tech in Artificial Intelligence

Surat, Gujarat

Salmiya Indian Model School, Kuwait

Graduated: 2024

High School (Class XII)

Kuwait
