## RESEARCH

### Beyond Readmission: A Leakage-Controlled, Externally Validated ML Pipeline for Post-Sepsis Outcome and Proxy PICS

- Built a leakage-controlled ML pipeline on 5,430 adult sepsis survivors (MIMIC-IV v3.1), predicting 5 administrative outcomes and 3 novel ICD-derived proxy indicators for Post-Intensive Care Syndrome (PICS) domains.
- Compared 10 modeling approaches (gradient-boosted trees, stacking/hybrid ensembles, late-fusion GRU/LSTM), reaching test-set AUC up to 0.93; confirmed via bootstrap CIs and paired DeLong tests.
- Externally validated on 21,443 eICU sepsis survivors, diagnosed a threshold-transfer failure, and recovered performance via evaluation-blind recalibration — a diagnostic template for cross-database EHR deployment.
