SUMMARY

Motivated B.Tech Artificial Intelligence student eager to learn and grow in a professional software engineering environment. I possess a fundamental understanding of Data Structures, Algorithms (DSA), and Object-Oriented Programming, alongside primary programming experience in Python and C/C++. I have also gained practical experience developing interactive web interfaces, building functional mobile applications, and training introductory Machine Learning models. Always curious to explore new technologies and improve my coding practices, I am seeking an internship opportunity to gain hands-on industry exposure, receive mentorship, and contribute positively to a development team.

EDUCATION

Bachelor of Technology in Artificial Intelligence

Aug 2024 - Present

Sardar Vallabhbhai National Institute of Technology, Surat
CGPA: 6.83 (current)

Key Coursework: Data Structures, Artificial Intelligence, Design and Analysis of Algorithms, Computer Organization, Operating Systems, Computer Networks, Database Management Systems, Machine Learning, Data Science, Cryptography, Human Computer Interaction.

PROJECT

AgenticRepo-Auditor

July 2026

Python, CrewAI, Groq API, Streamlit, Docker, GitHub Actions

GitHub

- Architected an autonomous multi-agent code analysis pipeline that orchestrates a sequential assembly line of AI experts (Senior Auditor and AppSec Lead) to evaluate codebase health, design patterns, and maintainability.
- Integrated the high-throughput Groq API leveraging advanced open-source LLMs to achieve ultra-low latency file audits and processing speeds.
- Engineered an interactive, developer-focused web frontend using Streamlit featuring real-time analysis status animations, historical audit log caching, and markdown-formatted report generation with custom export controls.
- Deployed the full application stack using a multi-stage Docker environment to optimize deployment image size and built a continuous integration workflow with GitHub Actions to automate syntax checks.

QuickDrop

Jan 2026

Kotlin, Android SDK, Sockets, Tailwind CSS

GitHub

- Developed a peer-to-peer Android application built with Kotlin for ultra-fast mobile-to-PC file sharing, bypassing internet routing via direct Wi-Fi and hotspot connections to achieve transfer rates surpassing standard USB cables and native sharing protocols.
- Engineered a custom multi-threaded HTTP server utilizing **ServerSocket** to host a responsive web frontend, enabling any PC on the local network to seamlessly browse and download the phone's internal storage.
- Integrated Android Foreground Services to ensure persistent background data transfer without interruption, and implemented the ZXing library for instant device pairing via QR codes.
- Designed a clean, single-page web interface using Tailwind CSS and JavaScript, communicating with the Kotlin backend via custom RESTful endpoints to dynamically render the phone's file system structure.

SKILLS

Languages:	Python, C/C++, SQL, HTML, CSS, Java, JavaScript
Libraries:	NumPy, Pandas, Scikit-Learn, Matplotlib, Seaborn, CrewAI, Streamlit
Tools:	Git, GitHub, Linux, Visual Studio Code, Android Studio, JupyterLab, Anaconda, Docker, GitHub Actions
Core Concepts:	Data Structures & Algorithms, Object-Oriented Programming, Database Management System, Machine Learning, Data Science
