Objective

Second-year B.Tech Artificial Intelligence student with a strong foundation in Data Structures and Algorithms, Database Management Systems, and Object-Oriented Programming, seeking a Software Engineering internship at GEP Worldwide. Experienced in building and shipping production-grade, client-facing full-stack systems under real deadlines through a Google Winter of Code project and hackathon-recognized work, with hands-on exposure to REST APIs, webhook-driven backend services, and GenAI tooling (Google Gemini API). Eager to contribute to GEP's AI-powered procurement and supply chain platforms by building scalable, reliable, and enterprise-grade software alongside a global engineering team.

Education

Sardar Vallabhbhai National Institute of Technology, Surat Bachelor of Technology, Artificial Intelligence; CGPA: 8.48	2024 – 2028
Burhani English Medium School, Dahod JEE Mains: 99.07 Percentile; 12th Boards: 89%	2022 – 2024

Skills

- **Core CS:** Operating Systems, Database Management Systems, Data Structures and Algorithms, Object-Oriented Programming
- **Programming Languages:** C, C++, Python, JavaScript
- **Tools & Platforms:** Git, GitHub, Postman, Railway
- **Backend Frameworks:** Django, Express.js, FastAPI
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Web & Frameworks:** HTML, CSS, React, Node.js, Vite, TailwindCSS
- **AI & APIs:** Google Gemini API, REST APIs, Webhooks

Projects

RABUSTE – Cafe Website Backend & Platform (MERN Stack)	Live Demo GitHub
• Built a full-stack MERN application (MongoDB, Express, React, Node.js) as part of Google Winter of Code, organized by GDGC, NIT Surat. • Designed database schemas, REST APIs, Firebase authentication, and client-side state management for a production, client-facing system. • Built an Admin Dashboard with real-time kitchen order management, inventory tracking, and business analytics. • Integrated Razorpay payment gateway with secure transaction handling, plus automated email notifications via NodeMailer.	
Social Saver Bot – Webhook-Driven Content Automation System	GitHub
• Built a distributed, webhook-triggered automation system that captures Instagram reel links from WhatsApp, processes them via backend services, and stores categorized results in a web dashboard. • Designed a FastAPI backend integrated with the Google Gemini API for automated content analysis, summarization, and category classification. • Implemented a WhatsApp bot (Node.js, whatsapp-web.js) that listens for messages and triggers backend services via webhooks. • Architected MongoDB-based storage for reel metadata, AI-generated summaries, and user session data, with OTP-based authentication.	
Flexora – Full-Stack E-commerce Platform (Django + React)	Live Demo GitHub
• Developed a full-stack project for Web Wonders, organized by Nexus, integrating a Django REST Framework backend with a React frontend. • Handled API integration, authentication, and state management across a clean, modular component architecture. • Implemented e-commerce functionality with Razorpay payment integration and a recommendation-based product discovery system.	
YelpCamp – Campground Booking Platform (Node.js, Express, MongoDB, EJS)	Live Demo GitHub
• Built a full-stack application using Node.js, Express, MongoDB, and EJS templating for dynamic routing and user interaction. • Implemented CRUD functionality for campgrounds and reviews, with secure authentication and persistent session management. • Focused on server-side logic, database integration, and reliable session handling.	

Achievements & Certifications

- Selected for Google Winter of Code (GWOC) under GDGC NIT Surat, delivering a real client-facing production project.
- Recognized at the Web Wonders Hackathon for outstanding UI design and innovation on Flexora, competing against 100+ participants.
- Treasurer, ACM Student Chapter – managed club finances and budgeting for technical events and workshops.
