SUMMARY

Computer Science undergraduate at SVNIT, Surat with hands-on experience in AI, full-stack software development, and analytical problem-solving. Passionate about building scalable technology solutions and applying data-driven, structured approaches to solve complex business and engineering challenges.

EDUCATION

Sardar Vallabhbhai National Institute of Technology (SVNIT), Surat, India

Aug 2024 – Present

B.Tech in Computer Science & Engineering — CGPA: 7.94 / 10 (through 4th Semester)

Noble International School, Qatar

May 2024

Class XII — 91.6%

TECHNICAL SKILLS

Languages: C, C++, Python, SQL, JavaScript, TypeScript

Web, Backend & Mobile: React.js, Next.js, Node.js, Express.js, Django, FastAPI, REST APIs, Tailwind CSS, HTML, React Native, Flutter

AI / ML & Computer Vision: Prompt Engineering (Claude, GPT, Gemini, Llama), YOLO, OpenCV, Scikit-learn, Random Forest, XGBoost, LightGBM, Azure AI Document Intelligence, Google Document AI

AI-Assisted Development: GitHub Copilot, Claude Code, Google Antigravity, Lovable

Cloud & Databases: Microsoft Azure, AWS, MongoDB, PostgreSQL, Firebase, Supabase, Vercel, Railway, Cloudinary

Tools & Collaboration: Git, GitHub, Figma, Canva, Microsoft Office (Excel, Word, PowerPoint)

EXPERIENCE

AI Product Management Intern — Campayn

Uttarakhand, India | Jun 2026 – Present

- Drove qualified-lead generation for an AI-powered brand-outreach pipeline, converting 100+ automated brand contacts into 8–9 qualified leads (~9% conversion) within the first month, earning recognition from the team for impact and effort.
- Designed and refined AI-powered proposal-generation and lead-qualification features using prompt engineering, increasing personalization at scale while reducing manual outreach effort.
- Collaborated across 3 cross-functional teams (product, AI, and growth) to ship internal automation tools for Campayn's cost-per-view (CPV) creator-marketing platform, cutting manual steps in business-development and sales workflows serving D2C brands across India.

Software Development Intern — Ghaghane Aviation

Bengaluru, India | May 2026 – Aug 2026

- Reduced average flight-planning time from ~3 minutes to 10 seconds (~94% faster) by redesigning backend workflows and optimizing performance for eFlight, the company's aviation operations platform.
- Helped migrate a legacy PHP application to a modern 3-tier architecture — React (TypeScript) frontend, Python/Django backend, PostgreSQL — deployed on Microsoft Azure.
- Developed and integrated new flight-planning and Flight Duty Time Limitations (FDTL) management features, and shipped several productivity enhancements that increased dispatch-team efficiency.

PROJECTS

AegisAI — Autonomous Urban Emergency Response System

Apr 11, 2026

Python, FastAPI, React, YOLO, OpenCV

- Built a full-stack, AI-powered emergency-response platform with a 4-model computer-vision detection pipeline (YOLO, OpenCV, Optical Flow, Isolation Forest), FastAPI backend, and React tactical dashboard to detect and prioritize urban incidents from CCTV feeds in real time.
- Designed an autonomous drone-dispatch engine with dynamic priority scheduling, geo-fenced no-fly-zone awareness, and real-time WebSocket telemetry streaming for situational awareness.

PRISM — Live Sports-Fest Tracking Platform

Mar 27, 2026

Next.js, TypeScript, Node.js, MongoDB

- Built a full-stack live sports platform for SVNIT's annual college-wide sports fest — Next.js, React, TypeScript, Tailwind CSS frontend and Node.js/Express, MongoDB backend — serving real-time scores, standings, and fixtures to 200–300 concurrent users.
- Deployed the frontend on Vercel and backend on Railway, delivering a scalable, low-latency system for a high-traffic campus event.

SpendWise — Cross-Platform Personal Finance Tracker

Dec 26, 2025

React Native, Firebase

- Independently designed and built a cross-platform (iOS/Android) finance app spanning 4 core modules — budgeting, expense categorization, savings goals, and group-expense tracking — plus a spending calendar and pattern-detection logic that turns raw transactions into visual insights and alerts, using Firebase for auth and cloud sync.

LEADERSHIP & ACHIEVEMENTS

- 1st Prize, Track 4 — COEP Inspiron 5.0 National Hackathon: ₹20,000 prize among 280+ teams for AegisAI (COEP Technological University).
- Junior Developer, GDSC SVNIT (2025–Present) — Co-organized "Hack the Tank 3.0"; Executive Member, ACM SVNIT — Led "Geekend 6.0" technical festival.
- Runner-up, Google Winter of Code (SVNIT) — Bloom Branding, a full-stack brand-showcase platform (Next.js, Express, MongoDB, Cloudinary) built for a real client.
- Reached Round 2 of the Finnovate Hackathon (Adani GIFT IFI & IIT Gandhinagar) with an automated invoice-extraction system (Azure AI, Google Document AI).
- Certification: McKinsey Forward Program — problem-solving, leadership, communication, and digital fluency (2026).
