

JVEL KOTHIYA

+91-6355007127 jvelkothiya11@gmail.com LinkedIn GitHub

Summary

Computer Science undergraduate with a focus on Software Engineering, Scalable Backend Infrastructure, and Machine Learning. Possesses hands-on experience developing end-to-end full-stack applications and predictive ML pipelines using C++, Python, Next.js, and modern cloud technologies. Passionate about algorithmic problem-solving, performance engineering, and building resilient backend systems.

Education

Sardar Vallabhbhai National Institute of Technology	2024 – 2028
<i>Bachelor of Technology in Computer Science & Engineering</i>	<i>CGPA: 7.23/10</i>
Modi Schools	2024
<i>Higher Secondary Certificate (HSC)</i>	<i>Percentage: 94.2%</i>
Jawahar Navodaya Vidyalaya	2022
<i>Secondary School Certificate (SSC)</i>	<i>Percentage: 93.4%</i>
JEE Mains 2024	
<i>All India Rank (AIR): 5708</i>	

Technical Projects

- RoadMate – Location-Based Roadside Assistance Platform** | *Next.js, Tailwind CSS, MongoDB, Leaflet.js*
- Designed and built a full-stack platform connecting stranded drivers with the nearest mechanic using MongoDB geospatial proximity queries
 - Integrated Leaflet.js to deliver an interactive map interface with real-time location visualization and dynamic route tracking
 - Built a fully responsive UI using Next.js and Tailwind CSS, ensuring optimal cross-device usability on desktop and mobile
 - Implemented RESTful API routes with robust input validation, structured error handling, and production-grade design standards
- Customer Churn Prediction System** | *Python, Scikit-Learn, Pandas, NumPy, Joblib*
- Built an end-to-end churn prediction pipeline using Random Forest algorithms, achieving a high ROC-AUC score of 0.844.
 - Optimized classification decision thresholds to 0.35, raising churning recall to 71% to support proactive customer retention workflows.
 - Executed detailed feature importance analysis using Pandas and NumPy, identifying key operational risk factors like tenure and service type.
 - Serialized and containerized the model using Joblib for real-time inference integration across downstream systems.

Technical Skills

Languages: C, C++, Python, JavaScript, HTML, CSS
Frameworks & Libraries: Next.js, React.js, FastAPI, Scikit-Learn, Pandas, NumPy, Tailwind CSS
Databases & Tools: MySQL, PostgreSQL, MongoDB, Git, GitHub, Joblib, Leaflet.js
Core Competencies: Software Engineering, Machine Learning Pipelines, Web Development, RESTful APIs

Achievements & Certifications

- Hackathons & Events:** Participant in HackOut '25 Hackathon and Microsoft AI Skills Fest, building practical AI and web solutions.
