SUMMARY

Computer Science undergraduate at SVNIT Surat with experience in Full Stack Development, backend engineering, and intelligent software systems. Skilled in building scalable MERN applications, REST APIs, and software solutions using modern development tools and strong computer science fundamentals.

EDUCATION

B.Tech Computer Science and Engineering 2024 – 2028 | Surat
Sardar Vallabhbhai National Institute of Technology (SVNIT), Surat
SGPA:9.4/10 CGPA:8.4/10

Class XII 2024 | Hyderabad
Narayana Junior College, Hyderabad
Percentage: 97%

TECHNICAL SKILLS

Programming C++, C, Python, JavaScript, SQL	Frontend Development React.js, HTML5, CSS3, JavaScript, Tailwind CSS
Backend Development Node.js, Express.js, Flask, REST APIs	Databases MySQL, MongoDB, SQLite
Tools & Platforms Git, GitHub, VS Code, Postman, Linux	Core Computer Science and Coursework DSA, DBMS, OOP, Operating Systems, Computer Networks, Software Engineering
Interests Full Stack Development, Software Engineering, Backend Development, Competitive Programming	

EXPERIENCE

Full Stack Developer Intern | Zaltix Soft Solutions Private Limited 05/2026 – 07/2026 | Hyderabad

- Contributed to the development of an HRMS web application using React.js, Node.js, Express.js, and MongoDB.
- Developed and integrated RESTful APIs for employee management and backend services.
- Built reusable React components and implemented seamless frontend-backend API integration.
- Resolved application bugs, implemented feature enhancements, and optimized existing modules to improve functionality, stability, and user experience.

PROJECTS

FACREC – Smart Attendance Management System 2025 – 2026
MERN Stack, OpenCV, Machine Learning, REST APIs

- Developed a full-stack attendance management system with automated real-time face recognition.
- Built RESTful APIs for student, faculty, subject, session, and attendance management.
- Designed and implemented MongoDB database schemas for students, enrollments, sessions, attendance, and recognition logs.
- Integrated a Python-based computer vision service using OpenCV for real-time face detection and recognition.
- Developed a responsive web dashboard for attendance monitoring, analytics, recognition history, and administrative operations.
- Implemented attendance reporting, session management, and performance optimizations for scalable recognition workflows.
- Implemented secure authentication and role-based access control for administrators and faculty members.

Hangman Game Platform – Full-Stack Application 2025
Python, Flask, MySQL, HTML, CSS, JavaScript, REST APIs

- Developed an interactive Hangman game using Flask and MySQL with secure user authentication and session management.
- Designed backend logic for random word selection, letter validation, scoring, and game state management.
- Built a normalized MySQL database to manage players, game sessions, words, categories, and leaderboards.
- Implemented a responsive user interface with Fetch API-based client-server communication, coin-based hints, persistent player statistics, and leaderboard tracking.

LogiSwarm – Multi-Agent Warehouse Navigation 2026
Python, ROS 2, Gazebo, Reinforcement Learning, A* Optimization

- Developed a warehouse simulation platform for task allocation and autonomous navigation.
- Implemented pathfinding algorithms including A* and Conflict-Based Search for route optimization.
- Designed traffic management mechanisms to improve navigation efficiency and reduce congestion.
- Simulated warehouse operations and robot coordination using ROS 2 and Gazebo.
- Optimized routing strategies through dynamic path planning and resource allocation.
