Education

Sardar Vallabhbhai National Institute of Technology, Surat
Computer Science and Engineering

2024 – 2028 B.Tech in
CGPA: 7.67 (till Semester 4)

Technical Skills

Languages: C, C++, JavaScript, Python
Frontend: HTML, CSS, React, Next.js
Backend: REST APIs, Authentication, Server-side Logic
Database: MongoDB, SQL
Tools: Git, GitHub, Vercel, APIs, Jupyter Notebook

Projects

Fake Social Media Account Detector (Mastodon)

Technologies: Python, Scikit-learn, Random Forest, Data Processing

- Built a machine learning model using Random Forest classifier to identify fake accounts on the Mastodon platform using profile attributes.
- Performed dataset preprocessing including feature extraction, cleaning, and normalization to improve prediction reliability.
- Implemented model training, validation and evaluation pipeline to analyze classification performance.
- Designed backend logic to process account data and generate authenticity predictions.
- **Key Challenge:** Selecting meaningful features to improve model accuracy.
- **Notable Feature:** Automated credibility prediction system capable of detecting suspicious accounts.
- **Repository:** <https://github.com/drashti777oo/Echelon-2k26.git>

Basho Pottery E-Commerce Website

Technologies: Next.js, React, MongoDB, Google Authentication, Razorpay, APIs

- Developed a full-stack e-commerce platform for a real pottery business enabling product browsing and secure purchasing.
- Implemented authentication system including Google Sign-In for secure user access.
- Integrated Razorpay payment gateway to enable online transactions.
- Connected frontend and backend with database for storing users, products and orders.
- Built responsive UI and API communication between client and server.
- **Key Challenge:** Managing secure authentication and payment flow while maintaining session consistency.
- **Notable Feature:** End-to-end purchase workflow from login to payment confirmation.
- **Live:** <https://bashoproject.vercel.app>

Positions of Responsibility

- Google Developer Groups on Campus Member, SVNIT
- Nexus Representative, SVNIT
- National Service Scheme (Technical Committee Head), SVNIT

Achievements & Activities

- Finalist in Echelon Hackathon — developed AI/ML based fake account detection system.
- Google Winter of Code — built website for a real business client.
- Participated in CanSat Competition — built Can-satellite using multiple sensors and data processing logic.
