PROJECTS

Patient Management System (Microservices architecture) | *Java* | *Springboot* | *PostgreSQL* | *Apache Kafka* | *gRPC* | *Docker* | *AWS* | [GitHub](#)

- Developed a scalable healthcare system using Spring Boot microservices, separating patient tracking, billing, and notification domain services.
- Leveraged gRPC for synchronous internal API execution and Kafka for resilient asynchronous event streams.
- Containerized microservices using Docker and deployed infrastructure to AWS, implementing container health checks and integration test coverage.

Project-management-platform | *React* | *Typescript* | *Spring boot 3.2.0 (Java 17)* | *Spring Security* | *Jwt Authentication* | *PostgreSQL 15* | [GitHub](#)

- User registration and login by JWT-based authentication with role-based access control and protected routes.
- Enabled public/private visibility toggles, project ownership, forking, collaborator access, and pull request tracking.
- Deployed frontend on Vercel, backend on Render web service, and database on Render PostgreSQL.

Among Us Game Automation Agent | *Python* | *OpenCV* | *PyAutoGUI* | *Computer Vision* | *Git* | [GitHub](#)

- Built an automated gameplay agent that captures live game frames using OpenCV template matching.
- Programmed custom computer vision logic to recognize UI buttons, mini-map coordinates, and player states.
- Automated character navigation and routine task execution via scripted PyAutoGUI input loops.
