Objective

Third-year CSE student at SVNIT Surat with a strong foundation in C++, data structures & algorithms, and systems-level thinking, plus hands-on project experience spanning robotics, computer vision, and full-stack development - seeking a Software Engineering Internship to build reliable, high-performance software and learn how large-scale, low-latency systems are designed.

Education

Bachelor of Technology in Computer Science and Engineering Sardar Vallabhbhai National Institute of Technology, Surat	2024 – Present
Higher Secondary Education (CBSE) Jain Public School, Ratlam	2022 – 2024

Technical Skills

Languages	C, C++, Python, JavaScript, SQL
Core CS	Data Structures & Algorithms, Operating Systems, Computer Architecture, OOP, System Design
Systems & Robotics	ROS2, Gazebo, Linux, Git
Web Development	React.js, Node.js, Express.js, HTML, CSS, REST APIs
Databases	MySQL, Firebase
ML/CV Tools	OpenCV, PyTorch
Domains	Embedded Systems, Robotics, Full Stack Development, Computer Vision

Projects

ROS2-Based Autonomous UAV System ROS2, C++, Gazebo Designed a modular UAV system in C++ with mission sequencing and safety-critical fail-safe protocols. Integrated GPS and BME280 sensor nodes with automated return-to-home logic, handling real-time sensor data and system state; validated across Gazebo simulations.	
AI-Based Micro-Movement Monitoring Python, OpenCV, MediaPipe, ML Built a real-time clinical monitoring system using MediaPipe and OpenCV to detect and classify subtle posture and distress signals. Designed an efficient pipeline for continuous physiological analysis, reducing dependence on manual observation.	 GitHub
Rabuste Coffee Platform React, Node.js, Express.js, REST APIs Contributed to a full-stack service platform featuring an AI-driven recommendation engine and secure transaction layer. Built the admin dashboard for operational analytics and developed backend REST APIs for user engagement tracking.	 Demo  GitHub
Internship Candidate Finder Node.js, Express, Firebase Engineered a multi-user recruitment portal with role-based access control (RBAC) and MVC architecture. Designed scalable data models in Firebase to handle concurrent recruiter and applicant sessions with clean separation of concerns.	 GitHub

Research Experience

Research Intern Indian Institute of Space Science and Technology (IIST), Thiruvananthapuram <i>Supervisor: Dr. Deepak Mishra</i>	Summer 2026
- Replicated SGCR-SR, the CVPR 2026 NTIRE shadow removal challenge winner, on ISTD and WSRD+ benchmarks. - Designed PS-RWCL, a novel loss function that fixes a gap in the original ablation - achieving simultaneous improvement across all four metrics (RMSE, SSIM, PSNR, LPIPS).	

Positions of Responsibility & Achievements

- Technical Member (Aero Division), Drishti - NIT Surat:** Developed a ROS2-based autonomous UAV system; led sensor integration (GPS, BME280) and modular firmware architecture for flight safety and operational reliability.
- Junior Developer, DSC NIT Surat:** Build and maintain technical projects for the developer community; contribute to full-stack solutions and participate in collaborative engineering sprints.
- Co-Head, Mindbend - Technical Festival, SVNIT:** Led technical event planning and execution for SVNIT's annual fest; coordinated cross-functional teams across multiple events and managed end-to-end logistics.
- Hackathon Achievements:** GWOC Finalist and WebWonders Finalist; built full-stack solutions under tight deadlines demonstrating rapid prototyping and algorithmic problem-solving.
