---

## SUMMARY

Fifth-semester B.Tech student at SVNIT and competitive programmer (1138 rating at codeforces.com) with hands-on expertise in Full-Stack Web Development (MERN). Proficient in Python with a growing focus on AI/ML applications. Passionate about engineering scalable technology solutions and applying strong core computer science fundamentals to solve complex problems.

## EDUCATION

**Sardar Vallabhbhai National Institute of Technology (SVNIT), Surat**

*B.Tech in Computer Science and Engineering* | Expected Graduation: 2028

- **Current Semester:** 5th Semester
- **CGPA:** 7.65/ 10.0

## TECHNICAL SKILLS

- **Languages:** C, C++, Python, JavaScript, SQL.
- **Frameworks & Libraries:** React.js, Node.js, Express.js, Socket.io, TensorFlow, PyTorch, OpenCV, Dxcam.
- **Tools & Technologies:** Git/GitHub, Firebase, Razorpay Integration, REST APIs, MongoDB, Redis.

## TECHNICAL PROJECTS

**BidKar . in** | *React, Tailwind CSS, Framer Motion, WebSockets* ( [Github](#) , [Live Link](#) )

Node.js, Express, MongoDB, Redis, Socket.io | May 2026 - Present | 3-person team; owned the backend | Real-time auction platform with automated settlements and mocked Aadhaar-based KYC

- **Complete Frontend Development:** Engineered the end-to-end frontend architecture of a digital auction marketplace using **React**, designing responsive, mobile-first interfaces with **Tailwind CSS and Framer Motion** to ensure seamless cross-device accessibility.
- **Real-Time UI Synchronization:** Developed a live bidding dashboard and precision countdown timers, integrating client-side WebSocket listeners to render sub-second price updates without triggering excessive DOM re-renders or page latency.

- **Optimistic UI Rendering:** Engineered optimistic UI updates for the bidding action, instantly reflecting a user's bid on the interface while the background API request processes, creating a highly responsive and frictionless user experience.

**SpikeSense** | *Python, TensorFlow, React, Tailwind CSS, WebSockets* ([GitHub](#))

dxcam, OpenCV, Tauri / Electron | July 2026 - Present | solo Project | Vanguard-safe, real-time Valorant win probability engine using a dual-stage ML pipeline

- **Zero-Lag Computer Vision Pipeline:** Engineered a non-intrusive desktop screen capture system using dxcam to process 40x40 pixel agent portrait crops. Designed a custom 3-layer Convolutional Neural Network (under 50,000 parameters) to classify game states in real-time without memory injection or reading game files.
- **Predictive Machine Learning Logic:** Trained a Dense Artificial Neural Network (ANN) on extensive Valorant Champions Tour (VCT) data to output live win probabilities based on normalized state vectors including allies, enemies, time, spike, and side. Optimized the end-to-end inference execution, from capture to socket send, to operate in under 16.6ms to seamlessly maintain 60+ FPS.
- **Real-Time Overlay UI Synchronization:** Developed a frameless, transparent, click-through desktop overlay using Tauri/Electron and React. Integrated a Python WebSocket server broadcasting JSON payloads at 5-10 Hz to feed live data into a sleek, animated Tailwind CSS heads-up display (HUD).

## ACHIEVEMENTS & EXTRACURRICULARS

- **Competitive Programming:**
  - Active participant on Codeforces (Skill Rating: 1138 ) and LeetCode ; solving over 150+ algorithmic problems focusing on Dynamic Programming and Graphs and Data structure and algorithm.
- **Biothon 2026 Finalist:** [Github](#) , ( [Certificates Final](#) , [Certificate Round 2](#) )
  - **Marwadi University, Rajkot** | Total Teams: ~400 teams | July 2026
  - **Built KisaanLink**, a WhatsApp-based marketplace connecting Gujarati farmers to equipment rentals and daily labor, cutting out the 10-30% markup charged by middlemen on tractor rentals
- **SOCF ( SUMMER OF CODESFEST 2.0) Finalist :** [Github](#) , [forked team repo](#)
  - **VIT Bhopal Campus, Sehore, Madhya Pradesh** | Total Teams: ~600 teams | 30 July 2026
  - **Built Doomscroll Gamify**, a React Native application designed to reduce doomscrolling on apps like Instagram and YouTube by tying the user's daily screen time limits to the growth and health of a personalized virtual companion. Engineered the usage tracking mechanism using the Android UsageStatsManager API, supported by a Node.js and MongoDB backend, and integrated the Gemini API to deliver empathetic, personalized daily check-ins and weekly behavioral insights.
