Projects

AI Among Us Game

2026 [GitHub]

- Built a 12-module AI architecture (Memory, Logic, Perception) to simulate human-like decision-making and task prioritization.
- Integrated PPO Reinforcement Learning enabling non-scripted movement and navigation in complex 2D environments.
- Engineered an event-driven Contextual Memory & Chat System allowing agents to recall evidence and negotiate dynamically.
- Implemented behavioral anomaly tracking and adaptive response generation for realistic social interaction simulation.
- Tech Stack: **Python, Reinforcement Learning (PPO), Pygame, Multi-Agent Systems**

Flight Booking System

2025 [GitHub]

- Developed a full-stack flight booking platform enabling users to search routes, book seats, and manage reservations.
- Implemented backend APIs for booking logic and authentication using modern backend frameworks.
- Built responsive frontend interfaces to ensure smooth user interaction and seamless booking experience.
- Tech Stack: **Django, Flask, FastAPI, React.js, Tailwind CSS, SQL**

Technical Skills

Programming Languages: Python, C/C++, HTML5, CSS, JavaScript, MySQL

Frameworks & Tools: Django, Flask, FastAPI, React.js, Tailwind CSS, Pygame, Git/GitHub

Positions of Responsibility

Executive

2025

Association for Computing Machinery (ACM), NIT Surat
