LeetCode | CodeForces | GeekForGeeks

EDUCATION

- **Sardar Vallabhbhai National Institute of Technology (SVNIT), Surat** 2024 – 2028 (Expected)
Bachelor of Technology in Computer Science and Engineering **CGPA: 8.47 / 10.0**
- **Bheeram Shreedhar Reddy INTL School, Kadapa** 2022
Central Board of Secondary Education **Percentage: 92.4%**

TECHNICAL SKILLS

Languages: C, C++17, Python, JavaScript, SQL, HTML/CSS

Core Concepts: Data Structures and Algorithms, DBMS (Normalization/SQL), Microprocessor and Interfacing Techniques, OOPs, Computer Networks, Automata and Formal Languages, Artificial Intelligence.

Frameworks/Tools: React.js, Node.js, Express.js, Electron.js, ESP32/Arduino, Git

Databases: PostgreSQL, MongoDB (Mongoose)

PROJECTS

- **Plate2Purpose: Surplus Food Redistribution Platform** [Live Demo](#) | [Git Repo](#)
MongoDB, Express.js, React.js, Node.js, JWT
 - Architected a full-stack MERN platform connecting Donors, NGOs, and Volunteers with role-based dashboards and document-based user verification.
 - Modeled a multi-stage donation lifecycle (Available → Claimed → In-Progress → Delivered) with synchronized state across linked FoodPost and Delivery documents.
 - Implemented secure, stateless authentication using JWT and bcrypt, with global Axios interceptors for token handling.
- **LogiBot: Autonomous AI Warehouse Navigator** [Video Demo](#) | [Git Repo](#)
C++, Python, A Search Algorithm, ESP32*
 - Built a distributed Goal-Based Rational Agent, separating reflexive edge control (ESP32 firmware for line-following and obstacle avoidance) from centralized strategic planning (Python server).
 - Implemented **A* Informed Search** with a Manhattan Distance heuristic to compute optimal, obstacle-aware paths across a 13-node RFID-localized topological graph, with real-time dynamic rerouting on path blockage.
- **Integrated Business System: Manufacturing ERP Desktop App** [Git Repo](#)
Electron.js, Node.js, PostgreSQL (NeonDB)
 - Designed a normalized (3NF) relational schema for a manufacturing business spanning employees, departments, inventory, suppliers, and buyers, and implemented it as a cross-platform Electron desktop application.
 - Built transactional workflows (purchases, sales, and production runs) with automatic, constraint-enforced stock adjustments across linked inventory tables, plus a live dashboard and full transaction history/audit view.

EXTRA CURRICULAR ACTIVITIES & ACHIEVEMENTS

- **Leadership:** Junior Developer at **GDGC SVNIT**, Executive at **ACM SVNIT**.
- **Algorithmic Problem Solving:** Solved **300+** problems across LeetCode, CodeForces, and GeekForGeeks, with a focus on Graph Theory, Dynamic Programming, and Data Structures.
- **Hackathon Participant:** Active participant in university-level hackathons and some international hackathons like ICPC. Passionate about building scalable software solutions and exploring technology for social good.
