Education

Sardar Vallabhbhai National Institute of Technology (SVNIT)

Bachelor of Technology in Computer Science and Engineering (CSE); CGPA: 7.56

Surat, Gujarat

Graduation Year:2028

Technical Skills

Languages: C/C++, Python, Go, JavaScript

Backend & Databases: Node.js, Express.js, PostgreSQL, Redis, REST APIs

Frontend: React.js

DevOps & Tools: Docker, Git, K6 Load Testing, Postman, Swagger/OpenAPI

Core Concepts: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Reinforcement Learning (Contextual Bandits), Path Planning (A*)

Projects

VaultPay (Custom Payment Gateway) | *Go, PostgreSQL, Redis, Docker, K6* [🐙 GitHub](#) | [📄 Article](#)

- Engineered a concurrent payment gateway backend in Go, utilizing PostgreSQL and Redis for an immutable audit ledger.
- Designed 'Bouncer' middleware for secure JWT authentication and documented the REST API via Swagger/OpenAPI.
- Containerized the architecture with Docker; executed K6 load testing to process 10k+ concurrent RPS with <45ms p95 latency and a 0% error rate.
- Validated complex transaction workflows via Postman and achieved 95%+ unit test coverage for robust reliability.

RL Choice Manager | *React, Node.js, RL (Contextual Bandits), Docker*

[🐙 GitHub](#)

- Engineered a data-driven SaaS platform utilizing Reinforcement Learning to actively learn and suggest optimal real-world user decisions based on dynamic environments.
- Programmed an Epsilon-Greedy strategy and numerically stable Softmax functions to calculate probabilities, preventing algorithmic filter bubbles.
- Built a mobile-first React.js UI featuring interactive data visualization pipelines via Recharts to display global trends.
- Containerized Node.js/Express backend with Docker for seamless CI/CD, deploying to Render and Vercel while securing the platform with JWT and Razorpay API integration.

Adaptive Path Planning Robot | *Python, A* Algorithm, Robotics*

[🐙 GitHub](#)

[📺 YouTube](#)

- Designed a grid-based autonomous navigation system for indoor environments using the A* path planning algorithm to compute optimal, collision-free paths.
- Implemented dynamic obstacle detection and real-time path re-planning, enabling adaptive route calculation.
- Built a Python-based simulation to model robot movement, obstacle avoidance, and decision-making workflows.
- Structured a modular architecture to support future integration with ROS2, LiDAR/Depth Cameras, and hardware.

Achievements & Coding Profiles

Competitive Programming: CodeChef Rating: 1542 (Max) [\[View Profile\]](#).

Data Structures & Algorithms: Solved 273+ DSA questions on LeetCode with a Max Contest Rating of 1504.

Joint Entrance Examination (JEE) Main: Secured an All India Rank of 13,556 out of 1.4 million candidates, showcasing strong analytical and mathematical problem-solving skills.

Extracurricular Activities & Interests

Interests: Software Development, Backend Architecture, Full-Stack Engineering, Robotics.

Leadership & Soft Skills: Active participant in SVNIT campus clubs including Nexus Events and RIAC (Entrepreneurship Cell). Strong aptitude for public speaking, negotiation, and cross-functional team collaboration.
