- Plantar Pressure-Based Gait & Injury Detection System** GitHub
Tech Stack: Python, Scikit-learn, Pandas, NumPy, Streamlit
 - Processed and engineered features from 1,440 plantar pressure samples for gait abnormality detection.
 - Trained a Random Forest classifier for injury-risk prediction using Scikit-learn.
 - Implemented a reusable preprocessing pipeline that standardized inference on unseen samples.
 - Built a Streamlit dashboard enabling real-time prediction and visualization of gait analysis results.
- Deforestation Classification using DistilBERT | DAICT Hackathon** GitHub
Tech Stack: *Python, PyTorch, Hugging Face Transformers*
 - Fine-tuned DistilBERT using Hugging Face Transformers for binary classification of deforestation-related reports.
 - Developed an end-to-end NLP pipeline covering preprocessing, tokenization, model training, evaluation, and inference.
