EDUCATION

Sardar Vallabhbhai National Institute of Technology (SVNIT), Surat

Bachelor of Technology in Electronics and Communication Engineering

Surat, India

Exp. May 2028

- **CGPA:** 9.04 / 10.0
- **Relevant Coursework:** Object-Oriented Programming (OOP), Digital Logic Design, Microprocessors and Micro-controllers.

TECHNICAL SKILLS

- **Languages:** C, C++, JavaScript, HTML, CSS.
- **Backend & Databases:** Node.js, Express.js, MongoDB, RESTful API Development.
- **Core Concepts:** Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Complexity Analysis, Operating Systems.
- **Developer Tools & Libraries:** VS Code, Git/GitHub, Postman, Bootstrap, Joi, Mongoose.

COMPETITIVE PROGRAMMING & ACHIEVEMENTS

- **LeetCode:** Rated **1,751** (Top ~10% worldwide). Solved **490+** algorithmic problems (310 Medium, 52 Hard). Consistently participate in Weekly Contests, demonstrating strong analytical problem-solving skills and abstract thinking.
- **Codeforces:** (Max Rating: **1215**). Actively solve mathematically rigorous Div 2 A/B problems to improve core logic and navigate ambiguous, undefined problem statements.
- **Complexity Analysis & Optimization:** Demonstrated deep understanding of advanced topics like Graph Theory (BFS/DFS) and Dynamic Programming, consistently developing highly optimized code with strict space/time complexity constraints.
- **Consistency:** Solved **850+** problems across LeetCode, Codeforces, and GeeksforGeeks, maintaining a strong sense of self-motivation and a fast-paced learning approach.

PROJECTS

[Full-Stack Property Rental Platform](#) | *Node.js, Express, MongoDB, EJS, Bootstrap*

Personal Web Project

- Built a full-stack MVC property rental platform using Node.js and Express, implementing clean architectural patterns for browsing, creating, editing, and deleting listings.
- Designed the database architecture with MongoDB and Mongoose, generating software of exceptional quality via robust data validation on both the frontend (Bootstrap) and backend (Joi).
- Wrote custom error-handling middleware to gracefully catch database exceptions and invalid routes, ensuring application stability and continuous uptime.

[Interactive Test Typing Engine](#) | *JavaScript, HTML, CSS, REST APIs*

Personal Web Project

- Developed a dynamic typing test web application using Vanilla JavaScript, implementing a Two-Pointer approach for real-time character validation and optimized DOM manipulation.
- Integrated third-party REST APIs via asynchronous JavaScript to handle external data streams seamlessly.
- Developed state-driven logic to track precise millisecond timestamps, accurately calculating real-time performance metrics (Net/Gross WPM and accuracy percentages).

[Simon Says Game](#) | *JavaScript, HTML, CSS*

Personal Web Project

- Built an interactive memory enhancement game where users mimic a complex sequence of colors.
- Implemented core game logic using JavaScript arrays to generate random sequences and validate user input in real-time.
- Utilized DOM manipulation to create dynamic visual cues (button flashes, background changes) and track high scores.
