

Manav Patel

📍 Surat, Gujarat — ✉️ thenutcracker1275@gmail.com — ☎️ +91-6351048657 — [in LinkedIn](#) — [@ GitHub](#)

Summary

B.Tech Artificial Intelligence student at SVNIT Surat with hands-on experience building full-stack web applications and data analysis tools. Secured **1st place at the ENFINITY Hackathon** in debut participation. Proficient in Python, C/C++, and modern web technologies with a focus on clean, practical solutions.

Education

Sardar Vallabhbhai National Institute of Technology (SVNIT), Surat

B.Tech in Artificial Intelligence

Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Statistics

Aug 2024 – Present

CGPA: 7.46/10

Projects

GULLAK – Zero-Clutter Financial Forecaster | [GitHub](#) | [Website](#)

2026

Next.js · TypeScript · Tailwind CSS

- Built a financial forecasting web application that computes **safe daily spending limits** from raw bank statement data, enabling data-driven personal finance decisions
- Engineered a robust **CSV/Excel parsing pipeline** to handle real-world financial datasets with edge-case validation and error handling
- Implemented **server-side processing** with Next.js API routes for secure and scalable data handling
- Designed a **decision-focused, minimal UI** using Tailwind CSS to surface actionable insights with zero clutter
- Tracked income, expenses, and spending velocity to help users optimize financial behavior over time

WhatsApp Chat Analysis Dashboard | [GitHub](#) | [Website](#)

2025

Python · Streamlit · Pandas · Matplotlib · Seaborn

- Developed an **interactive analytics dashboard** using Streamlit to transform raw WhatsApp exports into structured behavioral insights
- Performed **temporal trend analysis** with daily/monthly frequency heatmaps to identify peak communication windows
- Extracted engagement metrics including **word frequency, emoji usage, and per-user activity statistics**
- Processed and cleaned unstructured chat data using Pandas, handling diverse date formats
- Identified most active users and **communication patterns** across group and individual conversations

Crop Disease AI | [GitHub](#)

2025

Python · TensorFlow · FastAPI · React · Computer Vision

- Developed an **AI-powered crop disease detection system** using EfficientNetB0 and TensorFlow to classify plant diseases from leaf images across multiple crop categories
- Built a full-stack application with **FastAPI backend and React frontend**, enabling real-time image upload, disease prediction, and confidence scoring
- Implemented **transfer learning and image preprocessing pipelines** to improve classification performance on plant disease datasets
- Integrated an agriculture-focused chatbot that delivers **crop disease information, farming guidance, and relevant resource links**

Skills & Tools

Languages: C, C++, Python, SQL

Web & Backend: Next.js, Django, React.js, HTML, CSS, TypeScript

AI/ML: Supervised Learning, Ensemble Methods, Model Evaluation, Exploratory Data Analysis (EDA)

Libraries: NumPy, Pandas, Scikit-learn, Streamlit, Matplotlib, Seaborn, WordCloud

Tools: Git, GitHub, VS Code, Jupyter Notebook, Vercel

Problem Solving: Data Structures & Algorithms (DSA), LeetCode

Achievements

- Secured **1st place** at the **ENFINITY Hackathon**, organized by **Cutting Edge Visionaries, SVNIT**, in debut participation – built and deployed a full-stack financial forecasting tool end-to-end within the event duration

Clubs & Activities

- **Co-Head, MINDBEND** – SVNIT: Led event planning and coordination for the institute's technical festival
- **Member, NEXUS** – SVNIT: Participated in workshops, peer learning sessions, and collaborative tech initiatives
