🔗 Codeforces | 📄 LeetCode

Summary

Motivated 3rd-year Artificial Intelligence student at SVNIT Surat with a passion for building intelligent systems, low-level parallel compute, and production AI applications. Experienced in developing Computer Vision pipelines (YOLOv8/OpenCV), agentic architectures, and accelerating high-dimensional compute using CUDA C and OpenMP. Codeforces Specialist with strong fundamentals in C++, Rust, data structures, and algorithmic problem-solving.

Achievements

Code Cup 2026 Winner – ACM RVCE

Won Code Cup 2026, a 48-hour online buildathon organized by the ACM Student Chapter at RV College of Engineering (RVCE), for developing an innovative software solution.

Hackathon Finalist

Finalist in the ECHELON: National Level AI Cybersecurity Hackathon, demonstrating competitive skills in AI and cybersecurity.

Codeforces Specialist

Achieved Specialist rating on Codeforces, showcasing advanced algorithmic and problem-solving skills.

Education

B.Tech in Artificial Intelligence

SVNIT Surat

📅 2024 – 2028 | 📍 Surat
CGPA: 8.06 / 10.0

Class XII (CBSE)

Indira International School

📅 2024 | 📍 Kota
Grade: 89.4%

Class X (CBSE)

Global Public School

📅 2022 | 📍 Kota
Grade: 96.4%

Projects

Parallel K-Means Clustering

07/2026 – 07/2026

- Accelerated K-Means clustering using OpenMP and CUDA C across GPU blocks and multi-core CPU threads.
- Benchmarked execution times on high-dimensional text datasets, achieving significant speedup over sequential execution.
- Technologies: C/C++, CUDA, OpenMP, Parallel Computing. 🐙 GitHub

CLI Snake Game

07/2026 – 07/2026

- Programmed a real-time terminal game in Rust, applying memory safety, ownership, and zero-cost abstractions.
- Technologies: Rust, Systems Programming. 🐙 GitHub

HALO – Match Intelligence Console (CV Architect)

07/2026 – 07/2026

- Developed an AI-powered football analytics platform using YOLOv8, BoT-SORT/ByteTrack, and computer vision.
- Engineered vision pipelines for tracking, jersey recognition, and automated tactical event extraction (possession, passes).
- Technologies: Python, PyTorch, YOLOv8, OpenCV, Flask. 🐙 GitHub

ReMind – Agentic AI Learning Assistant

06/2026 – Present

- Architected a multi-agent AI tutor leveraging spaced repetition and exponential memory-decay models.
- Integrated Tutor, Assessment, and Scheduler agents into a FastAPI backend with a Next.js adaptive dashboard.
- Technologies: Python, FastAPI, Next.js, LLMs, Agentic AI.

LLM Prompt Injection Protection Extension

02/2026 – 02/2026

- Built a security layer using a regression classifier to detect, sanitize, and block malicious prompt injections in real time.
- Monitored model responses to prevent sensitive data leakage. 🐙 GitHub

NumPy

Rust

Certificates

Code Cup 2026 Winner – ACM RVCE

Winner of Code Cup 2026, a 48-hour online FIFA-themed buildathon organized by the ACM Student Chapter at RV College of Engineering (RVCE). 🔗

ECHELON Finalist

Finalist in the National Level AI Cybersecurity Hackathon. 🔗

Datathon Rank 49

Achieved 49th rank in the Kaggle Datathon competition on Campus, SVNIT. 🔗
