## SUMMARY

Full-stack developer who ships scalable, production-ready software. I've built and deployed a live cinema ticketing system serving real customers daily, scaled a fest backend for thousands of concurrent users, and developed an award-winning mental health platform. I work across the stack with Next.js, MERN, and Firebase, leveraging modern DevOps practices—such as Docker containerization and Nginx—to bridge robust backend architecture with high-performance user experiences.

| Languages    | C, C++, Python, JavaScript, HTML, CSS                        |
| Frameworks   | Next.js, React.js, Node.js, Express.js, Django, Tailwind CSS |
| DevOps/Cloud | Docker, Nginx, Microservices, Oracle OCI, Firebase Admin     |
| Databases    | MongoDB, Firebase Firestore, SQLite, MySQL                   |
| Tools        | Git, GitHub, Postman, REST APIs                              |

## EXPERIENCE

### Co-Head of Web Development | Sparsh (SVNIT Cultural Fest) Dec 2025 – Present

- Directed the technical architecture and managed a team of 10+ developers to build the official SVNIT cultural fest platform.
- Engineered a scalable MERN stack backend capable of handling thousands of concurrent users during peak registration periods.
- Collaborated cross-functionally to ensure seamless end-to-end deployment and zero downtime during high-traffic events.

## PROJECTS

### HMT Cinema ([hmtcinema.in](http://hmtcinema.in)) | Next.js, Firebase, Docker, Oracle OCI, Nginx Jan 2026 – Feb 2026

- Developed and launched HMT Cinema's **production-grade** online ticket booking platform, serving 100+ daily users with real-time seat selection and QR-code tickets.
- Engineered an **atomic checkout** using Firestore transactions to prevent double-booking — all pricing calculated server-side to block manipulation.
- Integrated **Cashfree payment gateway** with webhook verification and manual UPI top-up with coupon discounts re-validated at payment time.
- Implemented role-based access (User/Manager/Admin), reCAPTCHA, rate limiting (100 req/min), and a full admin panel for movies, shows, seats, bookings, FCM notifications, and QR scanning.
- Deployed the platform on an **Oracle OCI Virtual Machine** utilizing **Docker** containerization and an **Nginx** reverse proxy for optimized routing.

### MindSettler Mental Health Platform ([mindsettler-taupe.vercel.app](http://mindsettler-taupe.vercel.app)) | MERN Stack, NodeMailer, Vercel Dec 2025 – Jan 2026

- Winner, Google Winter of Code:** Recognized for technical innovation and open-source contribution.
- Built a mental health platform with UPI wallet top-ups (QR code generation + admin approval via atomic MongoDB sessions), wallet-debit session booking with balance checks and auto-refunds, and automated email notifications via Nodemailer.
- Integrated an interactive conversational AI chatbot utilizing the **Gemini LLM API** to provide contextual, real-time user assistance and engagement.

### Sparsh Official Fest Website ([www.sparshsvn.it](http://www.sparshsvn.it)) | MERN Stack, OTP Auth, Payment Gateway Jan 2026

- Co-Head of Web Development** — Led tech architecture for Sparsh Fest website, managing a team and a scalable backend supporting thousands of concurrent users.
- Built a scalable backend with MongoDB and Node.js handling thousands of concurrent users, with OTP auth and an admin dashboard.

## ACHIEVEMENTS & AWARDS

- Winner, Google Winter of Code (GWOC):** Top rank for 'MindSettler' — recognized for open-source excellence.
- Finalist, Web Wonders Competition:** National-level web dev competition at NIT Surat.
- Competitive Programming:** Solved **350+** problems on LeetCode; earned the **100 Days Badge**.
- JEE Main 2024:** Scored in the **99.18 Percentile** among 1.4 million candidates.
