Summary

Artificial Intelligence undergraduate currently studying Machine Learning and related concepts, with hands-on experience in Java, Android application development, modern frontend web development, and Python-based backend systems. Developed practical projects including an AI-powered microservices architecture, an Android jewelry billing app, and a Django-based quiz platform. Possess basic knowledge of Jetpack Compose, with a strong interest in full-stack development, distributed systems, and mobile applications.

Education

Sardar Vallabhbhai National Institute of Technology, Surat

2024 – 2028

Bachelor of Technology in Artificial Intelligence

Technical Skills

Programming Languages: Java, Python, JavaScript

Frameworks & Tools: Spring Boot, Spring Cloud, React.js, Tailwind CSS, Django, Android SDK, Jetpack Compose, RabbitMQ, Vite

Databases: PostgreSQL, MongoDB, SQLite, SQL

Concepts: Microservices Architecture, REST APIs, Object-Oriented Programming (OOPs), Data Structures

Soft Skills: Leadership, Team Management, Problem-Solving, Project Lifecycle Management, Collaboration

Projects

NeuroLens (Enfinity) – Adaptive Reading System | *GitHub*

2026

Technologies: React.js, React Native, FastAPI, PostgreSQL, Gemini 2.0 Flash, Chrome Extension API

- **Hackathon Winner:** Secured 3rd and 1st in this PS place by successfully developing and pitching this comprehensive cross-platform educational tool.
- Architected an adaptive reading system across a Chrome extension, React.js web application, and React Native mobile app sharing a unified user identity and database.
- Engineered real-time reading struggle detection using browser APIs to track viewport dwell time and rescroll counts.
- Integrated Gemini 2.0 Flash to dynamically rewrite complex paragraphs, provide inline vocabulary glosses, and generate personalized revision sheets.
- Developed an eye-strain adaptation engine that continuously adjusts typography, line-height, and background warmth based on session fatigue levels.

Rabuste Coffee Frontend - GWOC | *Link*

2026

Technologies: React.js, Tailwind CSS, Three.js, Framer Motion, GSAP, Vite

- Contributed to the frontend development for GOOGLE WINTER of CODE (GWOC) by building an immersive, responsive web interface for a coffee shop application.
- Implemented complex scroll animations and smooth page transitions using **GSAP** and **Framer Motion** for an elevated user experience.
- Designed a modern UI architecture leveraging **Tailwind CSS** and **Vite** to ensure optimized load times and high performance.

AI-Powered Fitness Tracking System | *GitHub*

2026

Technologies: Java, Spring Boot, Microservices, RabbitMQ, MongoDB, PostgreSQL, Gemini AI

- Architected a **microservices-based** fitness application utilizing Spring Boot and Spring Cloud (Eureka) for scalable service discovery and routing.
- Implemented asynchronous event-driven architecture using **RabbitMQ** to process fitness activities and decouple system components.
- Integrated **Google Gemini AI API** via Spring WebFlux to analyze user workout metrics and generate personalized recommendations and safety guidelines.
- Designed and managed distributed data storage utilizing **PostgreSQL** for relational user data and **MongoDB** for flexible activity and AI insight logs.

Jewelry Bill Generator | *GitHub*

2024

Technologies: Java, Android SDK, SQLite

- Developed an Android application for jewelry billing using **Java** and **XML**.
- Implemented **SQLite database** for secure local customer and transaction data storage.
- Automated **invoice generation** and multi-item bill calculations to improve merchant efficiency.

Positions of Responsibility

Sponsorship Team Member, Mindbend - Gujarat's Largest Techno-Managerial Fest

2026

Organizing Team Member, Hack The Tank (HTT) Hackathon | GDGC
