B.Tech Artificial Intelligence, SVNIT Surat | CGPA **8.75/10** | 2024-2028

Summary

Aspiring Software Engineer with strong foundations in Python, data structures, and full-stack development (MERN + Django). Builds production-style web products with authentication, interactive modules, and clean UI, and applies TensorFlow for practical ML tasks. Interested in scalable applications that combine reliable software engineering with applied AI.

Education

Sardar Vallabhbhai National Institute of Technology, Surat
B.Tech in Artificial Intelligence

2024-2028
Surat

- CGPA: **8.75/10**
- Focus areas: programming, web development, machine learning pipelines, and core CS fundamentals (DSA, OS, Linux).

Experience

Artificial Intelligence Intern
Personify

Mar-Apr 2025
Remote

- Built TensorFlow models for text classification, object detection, and pet face classification.
- Implemented landmark detection for identifying key features in images during model experimentation.
- Owned data preprocessing, training, and evaluation pipeline steps from raw inputs to measurable model outputs.

Projects

LogiFlow — Multi-Modal Logistics Decision Platform
Python, FastAPI, TypeScript, Next.js, SSE, Redis | Google Solution Challenge 2026 | GitHub | Live

- Owned Route Composer, SSE streaming, and decision-intelligence flows for comparing road, rail, air, water, and hybrid cargo routes.
- Built full-stack modules that normalize multi-pipeline results into one schema with priority-weighted scoring and Pareto ranking.
- Shipped production paths on Vercel / Cloud Run with live progress updates and plain-language AI route explanations.

EasyBook — Movie Ticket Booking Platform
MongoDB, Express.js, React.js, Node.js | Live

- Developed a MERN booking app with movie browsing, theater listings, releases, trailers, and user login.
- Implemented seat selection and booking workflow with a responsive UI for a complete ticket-booking journey.

Beneath The Blue — Ocean Conservation & Awareness
Interactive web platform | Web Wonder Finalist | Live

- Built Posts, Explore, Species, Threats, Community, and Quiz modules to educate users on marine ecosystems.
- Recognized as Finalist at Web Wonder Competition for the project.

Technical Skills

Languages: C, C++, Python, JavaScript, TypeScript

Frontend: HTML, CSS, React.js, Next.js **Backend:** Node.js, Express.js, FastAPI, Django **Databases:** MongoDB, Redis

Core CS: Data Structures & Algorithms, Operating Systems, System Design, Linux

Machine Learning: TensorFlow, data preprocessing, model training & evaluation

Tools & Deploy: Git, GitHub, MERN stack, Vercel, Render, GCP Cloud Run

Achievements & Leadership

- Google Solution Challenge 2026 — LogiFlow (Neural Foundry); Route Composer & SSE & decision intelligence
- Finalist, Web Wonder Competition — *Beneath The Blue*
- Core Member, Bureau of Indian Standards (BIS) Student Chapter, SVNIT Surat — contributing to campus standards awareness and chapter activities
