Data Science Intern — eBay | Bengaluru (Hybrid)

B.Tech Artificial Intelligence, SVNIT Surat | CGPA **9.20/10** | Graduating **2028**

SQL | Python | Statistics | Machine Learning | Experimentation | Product Analytics

Summary

Data science-oriented **B.Tech Artificial Intelligence** student (CS/Statistics-related), graduating **2028**, seeking eBay’s **Data Science Intern** role in Bengaluru. Turns large structured datasets into decisions: sample → explore/visualize → model → communicate insights. Proficient in **SQL** and **Python** for wrangling, EDA, statistical analysis, and prototype ML models (segmentation, prediction, ranking-style trade-offs). Strong in **descriptive and inferential statistics**, experimental design (train/validation, metric definition, evaluation), and presenting actionable findings to technical and non-technical stakeholders. Familiar with **NoSQL** data stores (**Firebase/Firestore**) and large-scale data tooling patterns; eager to deepen warehouse-scale SQL and site experimentation (A/B) on marketplace problems.

Education

Bachelor of Technology in Artificial Intelligence
Sardar Vallabhbhai National Institute of Technology (SVNIT), Surat, India

CGPA: 9.20/10
Aug 2024 – May 2028

- Currently enrolled bachelor’s in Data Science / Computer Science / Statistics-related field; graduating **2028**; 0–3 years relevant experience band
- Coursework:** Probability & Statistics, Machine Learning, Linear Algebra, DBMS/**SQL**, Data Structures & Algorithms, Software Engineering

Data Science Projects

LogiFlow — Predictive Modeling & Decision Analytics (Google Solution Challenge 2026, Global Top 106)

Apr 2026 – Jun 2026
GitHub | Live

Python, SQL, Pandas, NumPy, Scikit-learn, feature engineering, cross-validation, Redis

- Built end-to-end analytics on a **large structured dataset (15,650 train-day records / 9,526 stations)**: sampled, examined, and visualized delay drivers to form hypotheses and root-cause narratives.
- Engineered features and trained **prototype ML models** (Gradient Boosting) with cross-validation—**MAE 22.7 min, 81%** within 30 min; used metrics to compare alternatives (cost/time/risk Pareto ranking) for product-style decisions.
- Wrote **SQL**/Python pipelines to curate, join, and validate data; locked correctness with **100/100** automated business-rule checks—experimentation mindset (define metric → evaluate → iterate).

Community Hero — Categorization & Noisy User Data Pipeline (Vibe2Ship 2026, Global Top 20)

Jun 2026
GitHub | Live

Python, TypeScript, Firebase/Firestore (NoSQL), Gemini API, descriptive analytics

- Built an AI categorization pipeline over messy user-submitted reports; defined quality criteria, handled noisy inputs, and surfaced routing/priority insights for operational decisions.
- Stored and queried event-style data in **Firestore** (NoSQL); communicated product outcomes clearly in demos and written documentation.

AirHelp — Retrieval & Decision-Support Prototype (PowerMind Hackathon 2026)

2026
GitHub

Python, NumPy, embeddings/RAG, FastAPI, evaluation under load

- Prototyped an insight/retrieval system over structured + unstructured knowledge; iterated on indexing/chunking and evaluated quality under **50–100** concurrent users (latency **1–3s**).

Experience

Software Engineering Intern (Data-Aware Production Systems)

IFFCO (Indian Farmers Fertiliser Cooperative), Phulpur Unit, Prayagraj, India
Jun 2025 – Jul 2025

- Queried and prepared operational **MySQL/SQL** datasets for reporting and automation (**50+ daily** workflows); reviewed data quality (missing fields, duplicates, validation rules) before production use.
- Partnered with cross-functional operations stakeholders to clarify requirements, deliver insights-driven tooling, and present progress clearly—bridging analytical findings to business process outcomes.

Technical Skills

Required stack: **SQL** (joins, aggregations, window-function style analytics), **Python** (Pandas, NumPy, Scikit-learn, EDA, modeling, automation)
Data science: Descriptive & inferential statistics, hypothesis-driven analysis, feature engineering, prototype ML models, segmentation/ranking metrics, experimental evaluation, root-cause analysis
NoSQL / data platforms: Firebase/**Firestore** (NoSQL document store); Redis; comfortable expanding into Hive/Spark-style large-data tooling
Also: Java, C++, Git, pytest, clear communication of insights to partners

Achievements

- LeetCode Knight:** **2048** peak, **744** solved, 32 contests; **Codeforces Specialist:** **1419, 265** solved — strong analytical problem-solving
- Google Solution Challenge 2026 — Global Top 106** (LogiFlow, Technical Co-Lead); **Vibe2Ship 2026 — Global Top 20**
- McKinsey.org Forward Fellow (2026)**; ACM SVNIT Executive Member & Nexus DSA Mentor — presents technical ideas clearly
