slice Hiring Team
Quality Engineering — Bengaluru

Re: Software Development Engineer in Test (SDET) Intern

Dear Hiring Team,

I am applying for the SDET Intern role on slice's Quality Engineering squad in Bengaluru. I am a B.Tech Artificial Intelligence student at SVNIT Surat (CGPA 9.20/10, graduating May 2028). I am drawn to QE because I treat testing as engineering: translate requirements into robust test cases, validate APIs and data carefully, automate what should be automated, and partner with developers to root-cause issues—with an eye for detail and a passion for quality.

My strongest programming languages are Python and Java/OOP, with hands-on SQL/MySQL, Git, and Linux/shell. At IFFCO, I built and validated 10+ REST APIs, reviewed data quality (missing fields, duplicates, validation rules) before production, and contributed unit/integration testing, debugging, and CI/CD. On LogiFlow (Google Solution Challenge 2026, Global Top 106), I designed and maintained a pytest regression suite with 100/100 automated business-rule checks—turning product/engineering requirements into testable contracts before release. I have also exercised web/API and mobile-friendly paths end-to-end while shipping Community Hero (Vibe2Ship 2026, Global Top 20) and evaluating AirHelp under 50–100 concurrent users.

I am a daily Cursor and Claude user focused on AI-driven testing efficiency: structured prompts (given/when/then, boundary and negative cases) to draft pytest scaffolding and fixtures faster, then human review so we do not ship false greens. I am eager to deepen Selenium, Appium, and REST-Assured-style frameworks on the job while contributing immediately with API testing, automation discipline, and clear communication in an agile team.

slice builds consumer fintech products where quality is the product. I would love to help make every release fast, flawless, and future-ready in Bengaluru.

Thank you for your consideration.

Sincerely,
Ojas Srivastava
