Hiring Team

Electronic Arts (EA Digital Platform)
Hyderabad, Telangana, India

Re: Application for Software Engineer Intern – Systest Engineer (Role ID 214959)

Dear Hiring Team,

I am writing to apply for the Software Engineer Intern (Systest Engineer) role with EA Digital Platform in Hyderabad. I am a penultimate-year B.Tech Artificial Intelligence student at SVNIT Surat (CGPA 9.20/10, graduating May 2028) with strong foundations in C++, Python, distributed systems, and platform testing. I am excited by EADP's mission to deliver cross-platform infrastructure that keeps players connected, and I would welcome the chance to contribute to load simulation, test automation, and performance analysis on that scale.

On a personal **Career Automation Stack** I have built since **June 2026**, I designed four integrated pipelines: **Internship Scout** (daily multi-source job aggregation across 965+ companies via Greenhouse, Lever, LinkedIn, Unstop, and more); **Hackathon Scout** (elite MNC hackathon discovery on Unstop/Devfolio with PPI filters); **Hiring Scout** (5K+ tiered recruiting contacts from public sources with scheduled discovery and rate-limited cold outreach); and **OA Forge** (company-specific OA practice with a hybrid C++ judge, 14K+ evidence-tracked occurrences, 5.5K+ test cases, and timed mock-session simulation). This maps directly to building automation tools, distributed schedulers, test harnesses, and accurate result analysis. At IFFCO, I automated 50+ daily workflows with Node.js and MySQL and performed unit/integration testing and root-cause analysis in a cooperative team.

On LogiFlow (Google Solution Challenge 2026 Global Top 100), I co-led a scalable backend on GCP Cloud Run with Redis caching, profiling hot paths to 100–400 ms latency under read-heavy load. I built a pytest regression suite with 100/100 business-rule checks and documented test design for performance regressions. On AirHelp, I stress-tested concurrent WebSocket sessions for 50–100 users and troubleshooted latency bottlenecks to achieve 1–3s response times. These projects reflect my comfort with cloud platforms (GCP, AWS familiarity), Redis, MySQL, and independent problem-solving under multiple parallel tasks.

I bring strong competitive programming fundamentals (LeetCode Knight 2048; Codeforces Specialist 1457) and a track record of clear communication, peer collaboration, and technical initiative. I would welcome the opportunity to support EADP's systest engineering team in Hyderabad. Thank you for your time and consideration.

Sincerely,
Ojas Srivastava
